Natural Language Processing with Deep Learning CS224N

The Future of Deep Learning + NLP

Kevin Clark

Deep Learning for NLP 5 years ago

- No Seq2Seq
- No Attention
- No large-scale QA/reading comprehension datasets
- No TensorFlow or Pytorch
- …

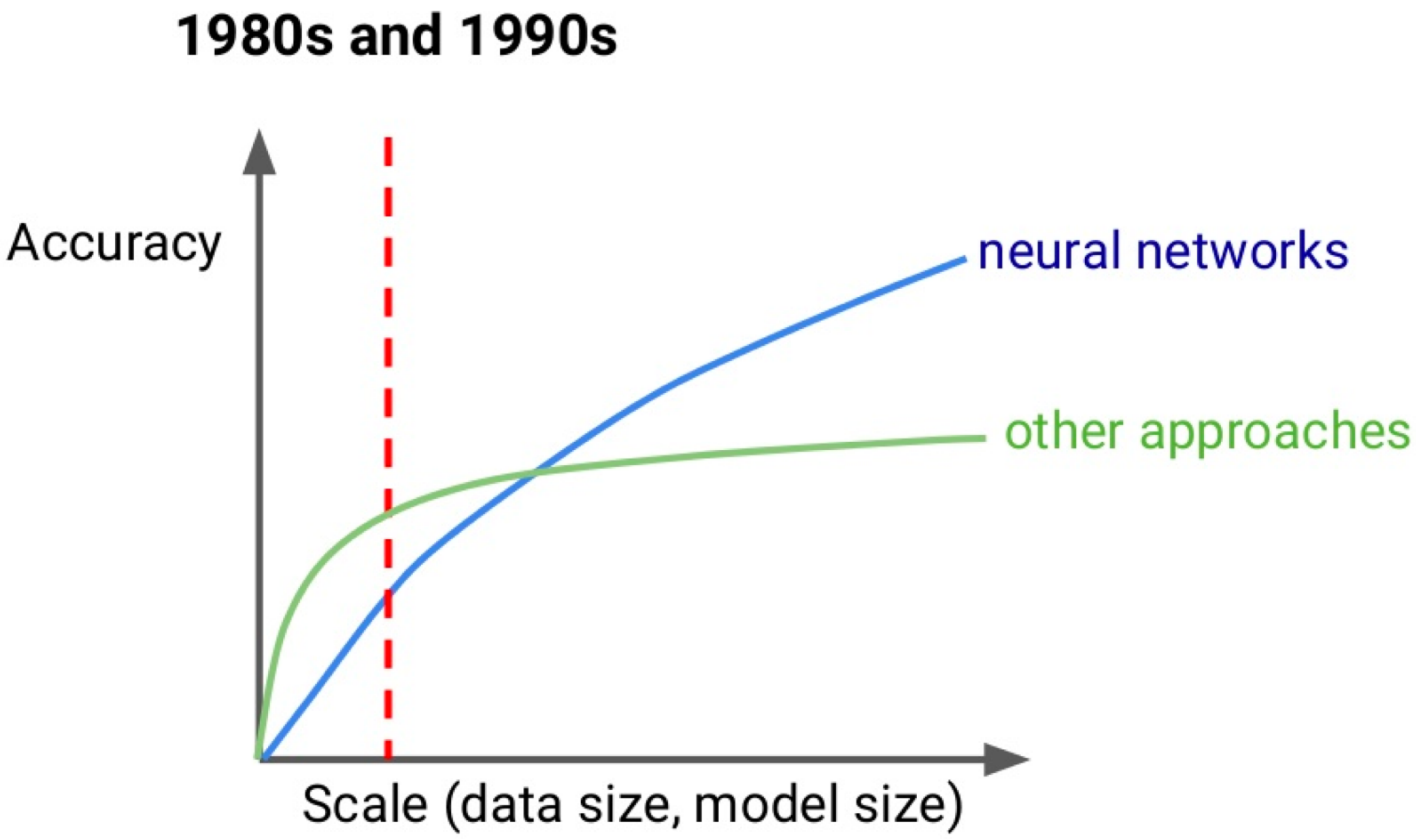
Future of Deep Learning + NLP

- **Harnessing Unlabeled Data**
  - Back-translation and unsupervised machine translation
  - Scaling up pre-training and GPT-2

- **What's next?**
  - Risks and social impact of NLP technology
  - Future directions of research

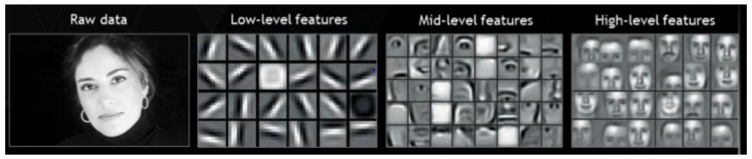
Why has deep learning been so successful recently?

Why has deep learning been so successful recently?

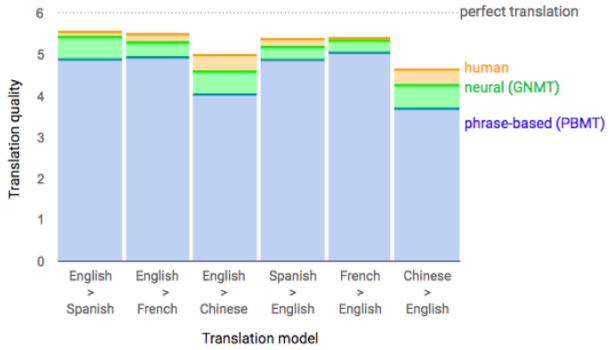


Big deep learning successes

- Image Recognition:
  Widely used by Google, Facebook, etc.



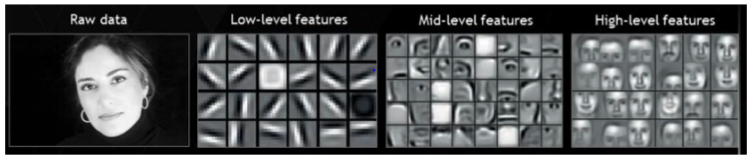
- Machine Translation:
  Google translate, etc.



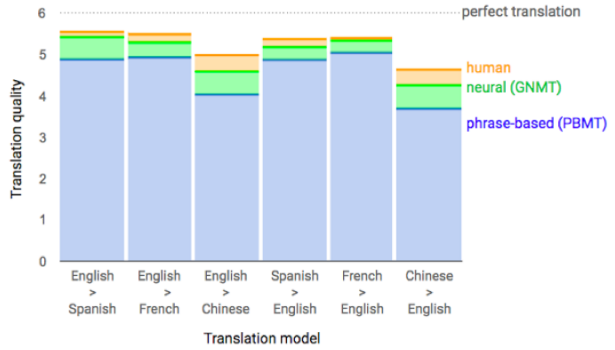
- Game Playing:
  Atari Games, AlphaGo, and more

Big deep learning successes

- Image Recognition:
  ImageNet: 14 million examples



- Machine Translation:
  WMT: Millions of sentence pairs



- Game Playing:
  10s of millions of frames for Atari AI
  10s of millions of self-play games for AlphaZero

NLP Datasets

- Even for English, most tasks have 100K or less labeled examples.

- And there is even less data available for other languages.
  - There are thousands of languages, hundreds with > 1 million native speakers
  - <10% of people speak English as their first language

- Increasingly popular solution: use **unlabeled** data.

Using Unlabeled Data for Translation

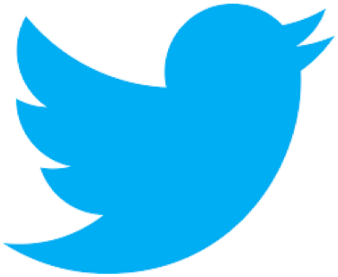
Machine Translation Data

- Acquiring translations required human expertise
  - Limits the size and domain of data

TED

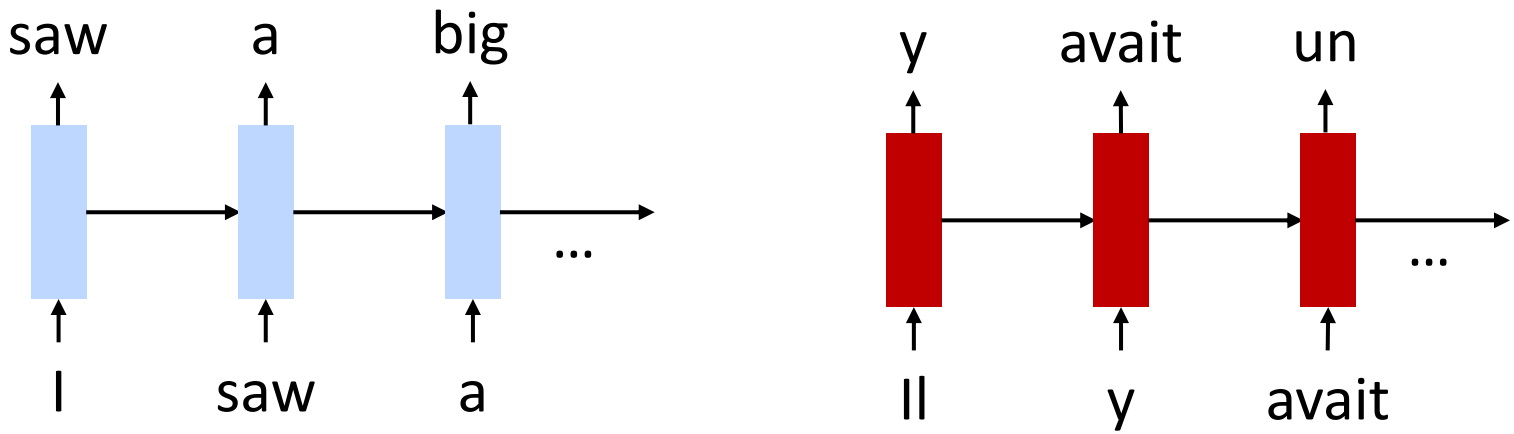
PS

- Monolingual text is easier to acquire!

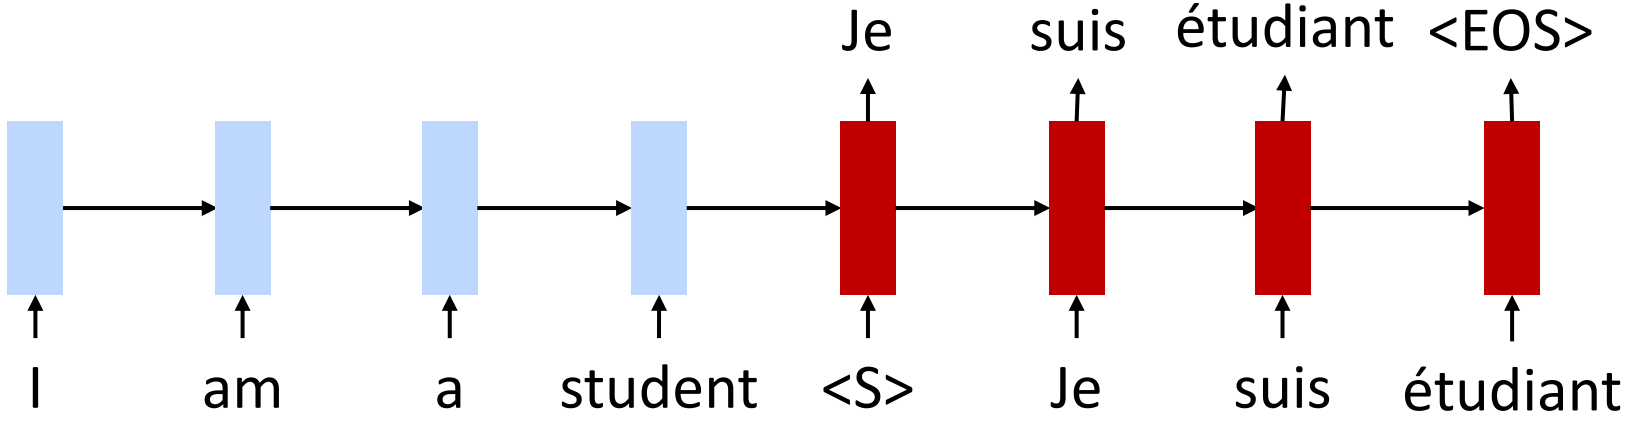


Pre-Training

1. Separately Train Encoder and Decoder as Language Models

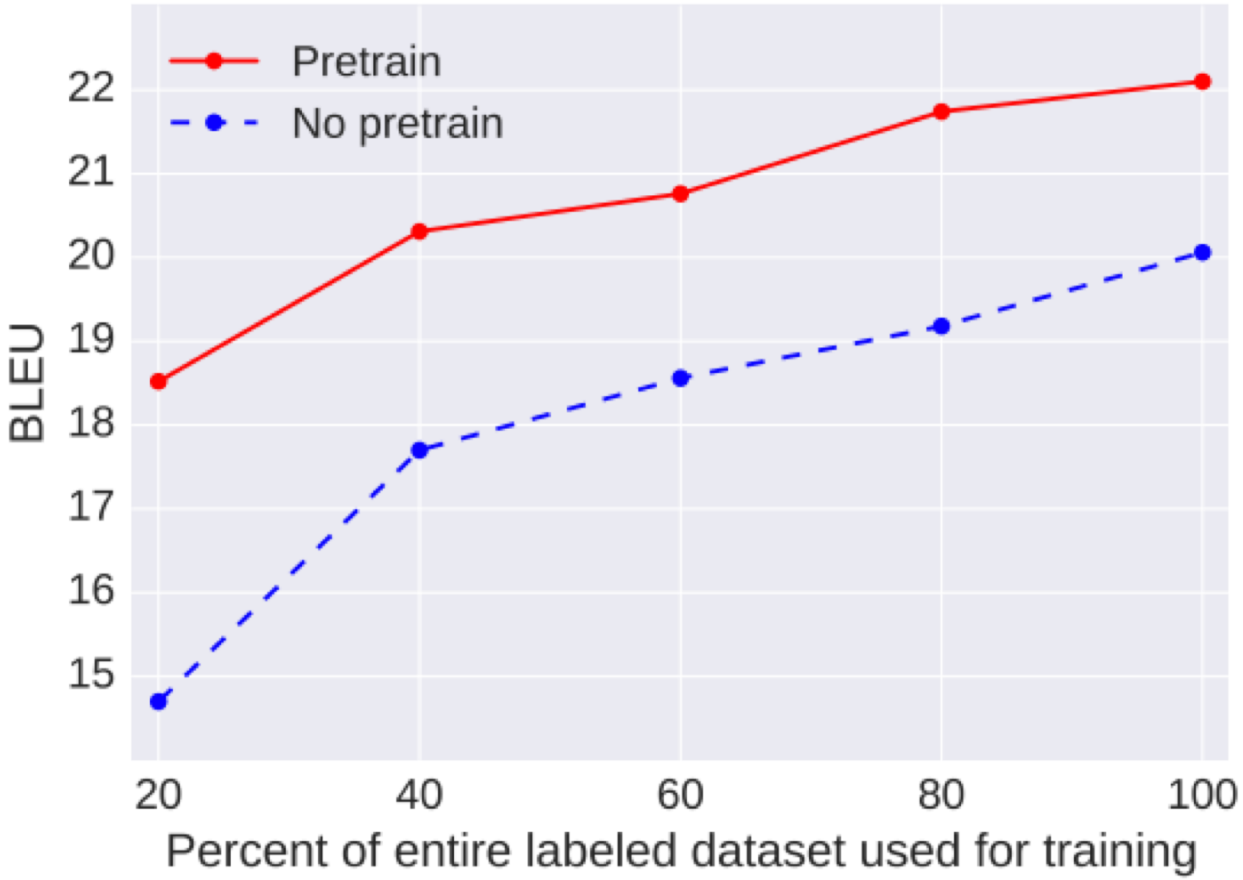


2. Then Train Jointly on Bilingual Data



Pre-Training

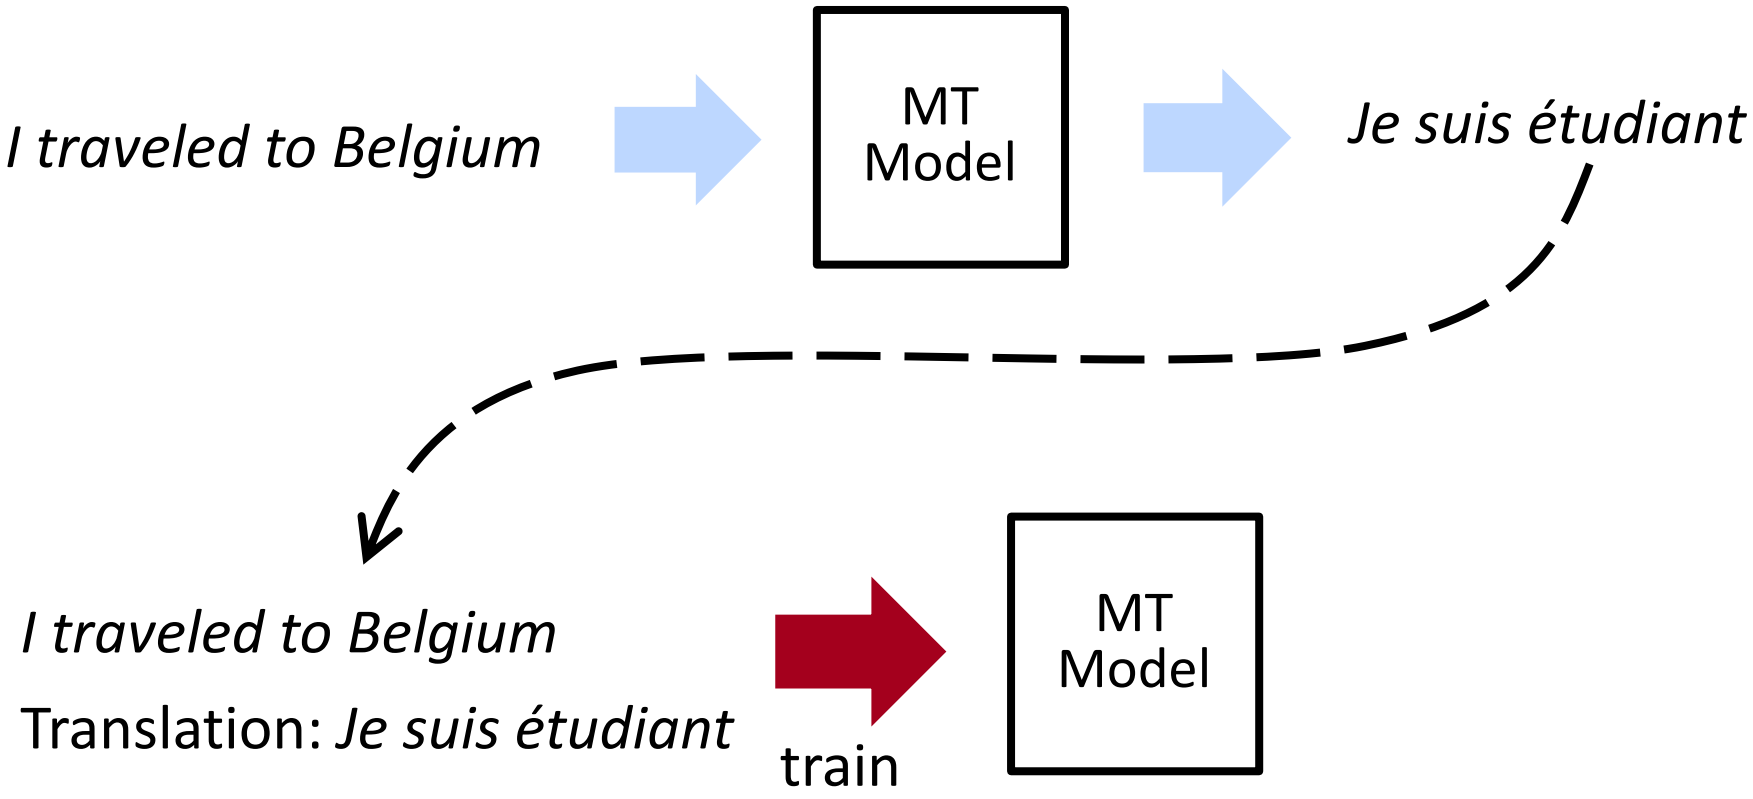
- English -> German Results: 2+ BLEU point improvement



Ramachandran et al., 2017

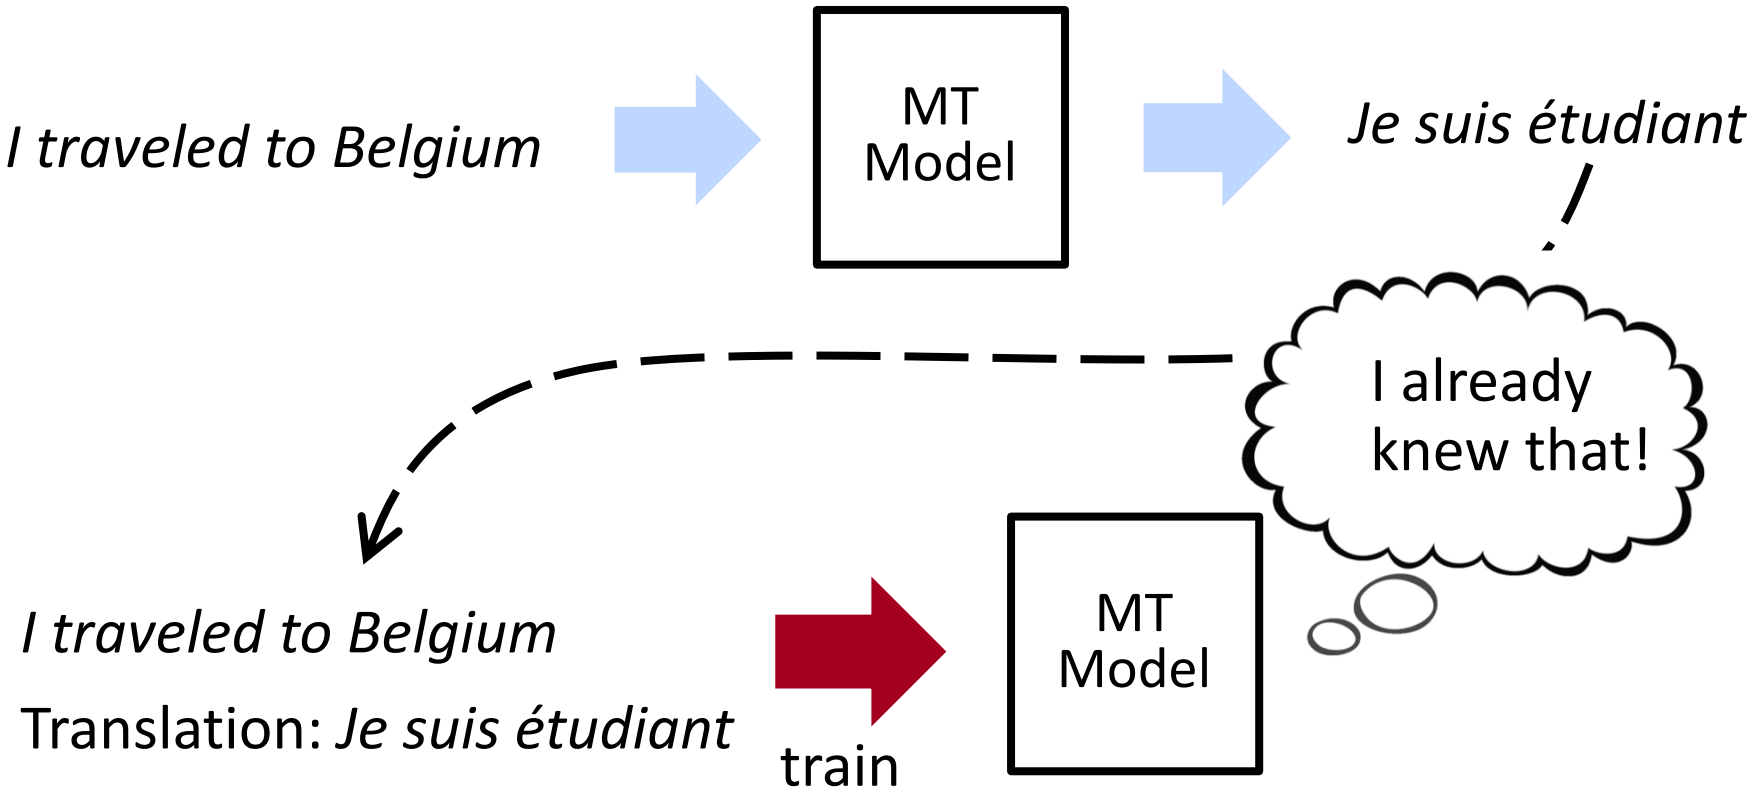
Self-Training

- Problem with pre-training: no “interaction” between the two languages during pre-training
- Self-training: label unlabeled data to get noisy training examples



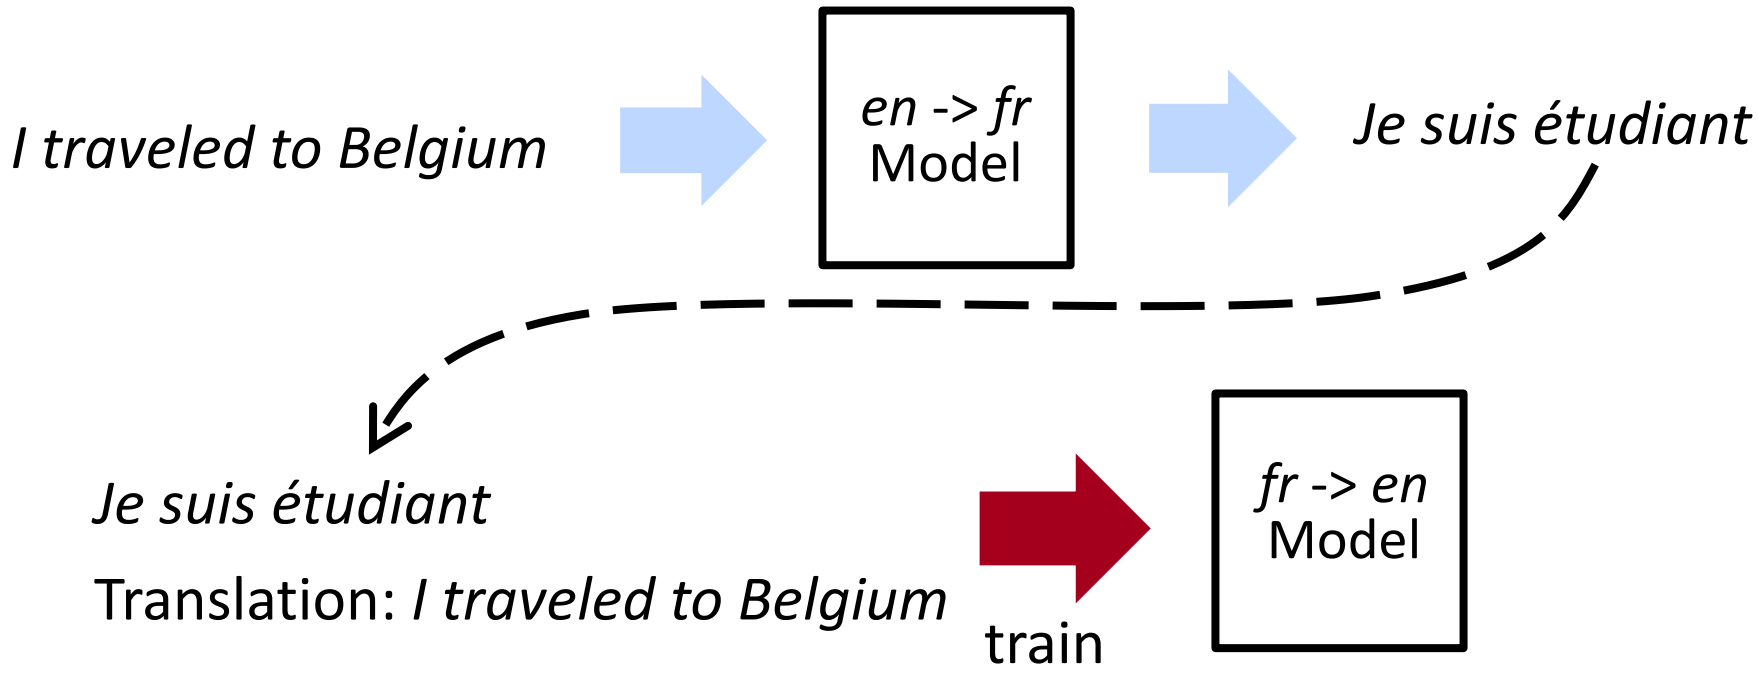
Self-Training

- Circular?



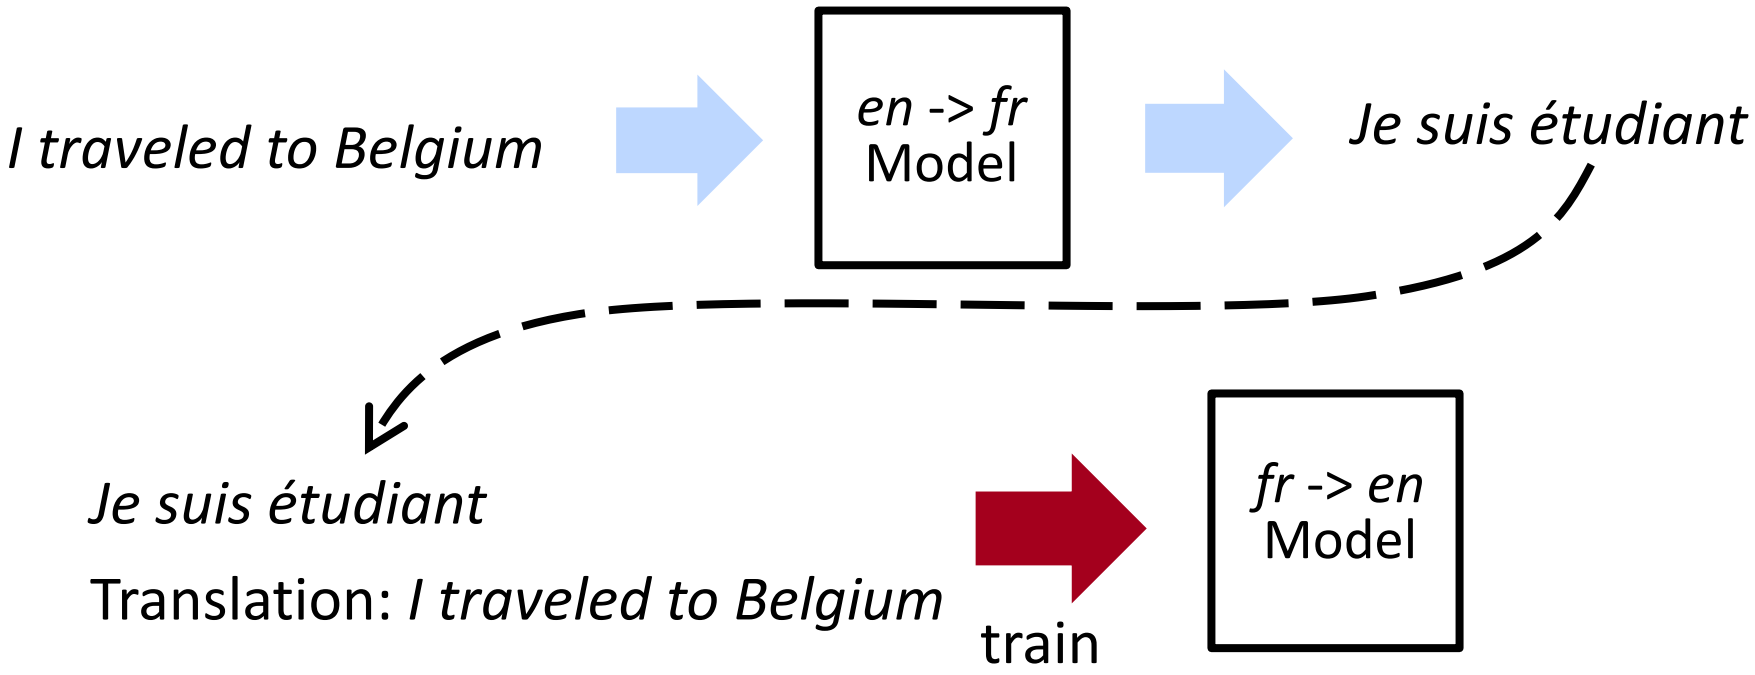
Back-Translation

- Have two machine translation models going in opposite directions (*en -> fr*) and (*fr -> en)*



Back-Translation

- Have two machine translation models going in opposite directions (*en -> fr*) and (*fr -> en)*



- No longer circular
- Models never see “bad” translations, only bad inputs

Large-Scale Back-Translation

- 4.5M English-German sentence pairs and 226M monolingual sentences

Citation	Model	BLEU
Shazeer et al., 2017	Best Pre-Transformer Result	26.0
Vaswani et al., 2017	Transformer	28.4
Shaw et al, 2018	Transformer + Improved Positional Embeddings	29.1
Edunov et al., 2018	**Transformer + Back-Translation**	**35.0**

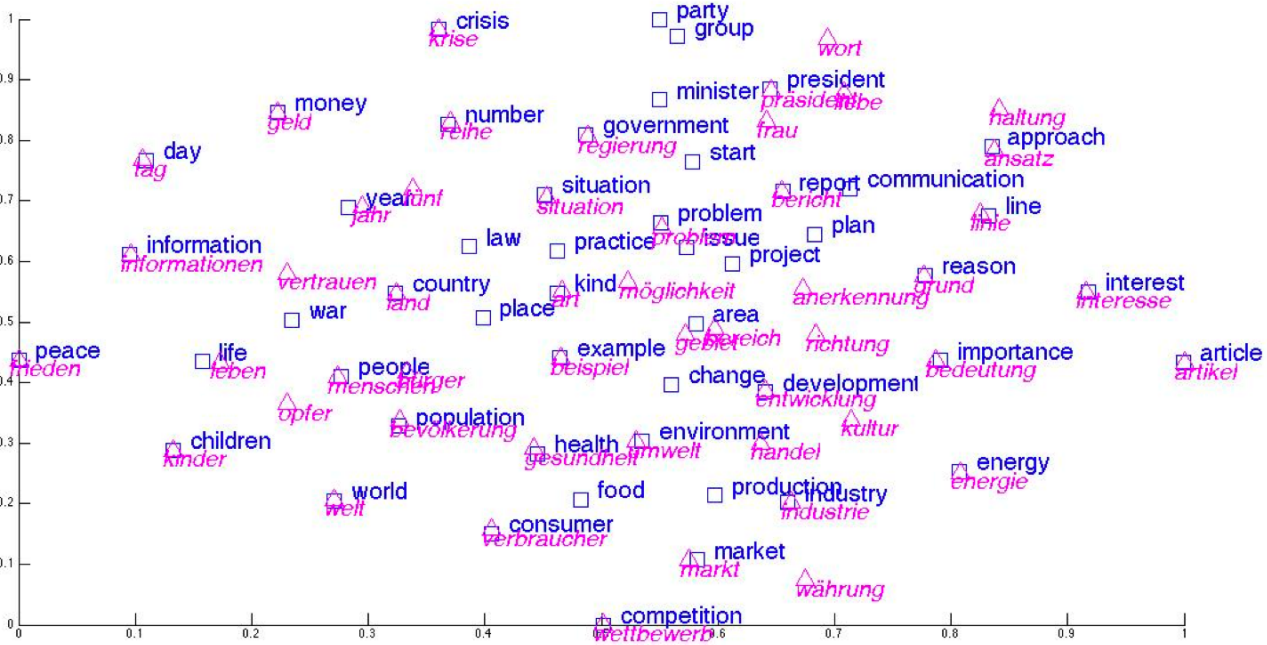
What if there is no Bilingual Data?

What if there is no Bilingual Data?

Unsupervised Word Translation

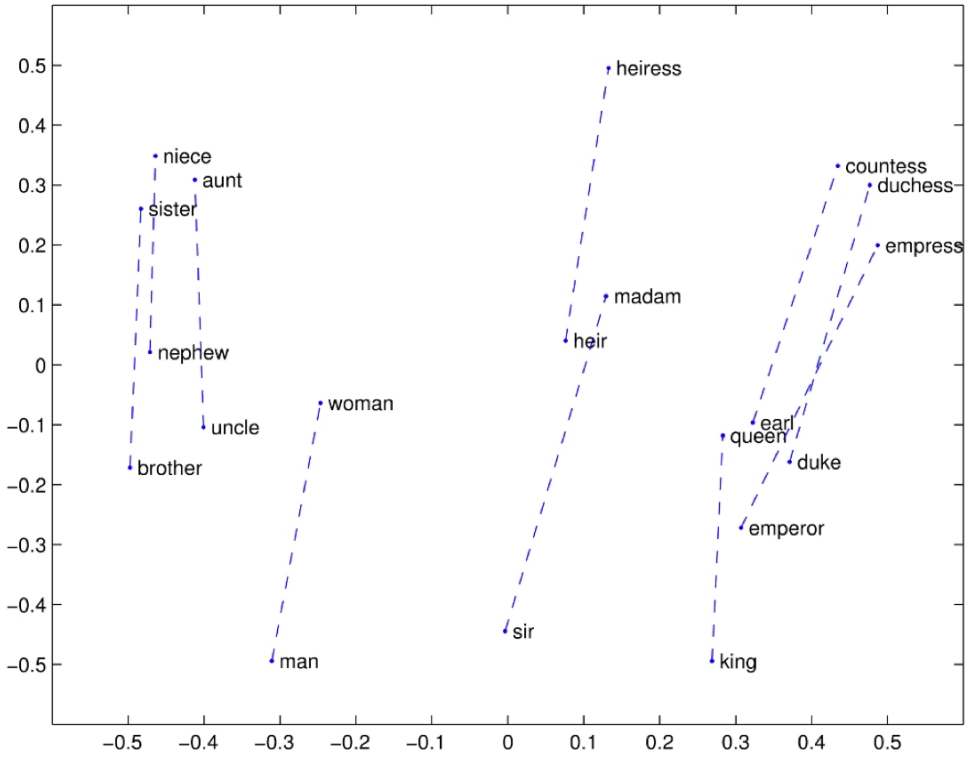
Unsupervised Word Translation

- *Cross-lingual word embeddings*
  - Shared embedding space for both languages
  - Keep the normal nice properties of word embeddings
  - But also want words close to their translations
- Want to learn from monolingual corpora



Unsupervised Word Translation

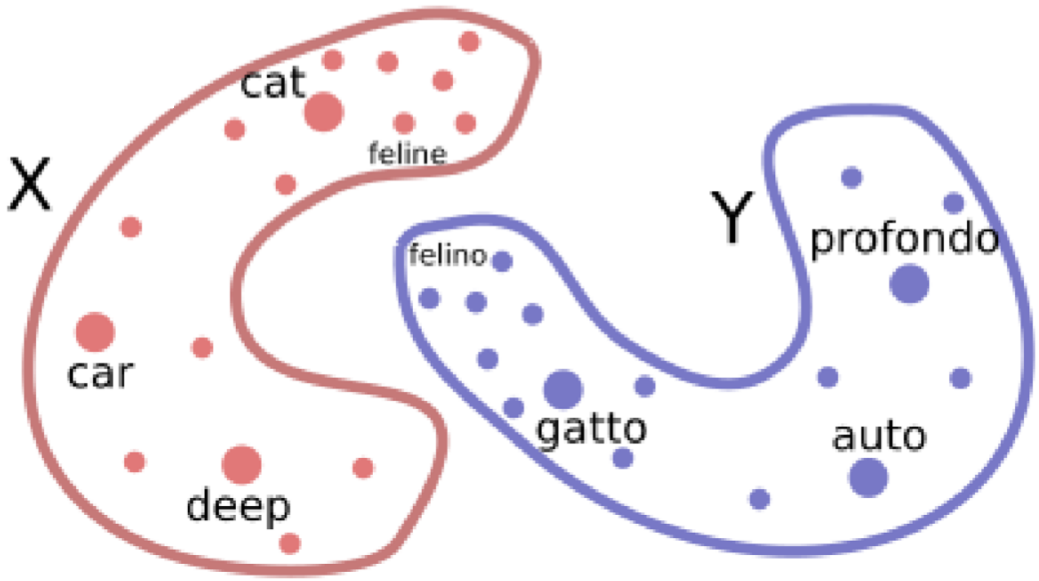
- Word embeddings have a lot of structure
- Assumption: that structure should be similar across languages



Unsupervised Word Translation

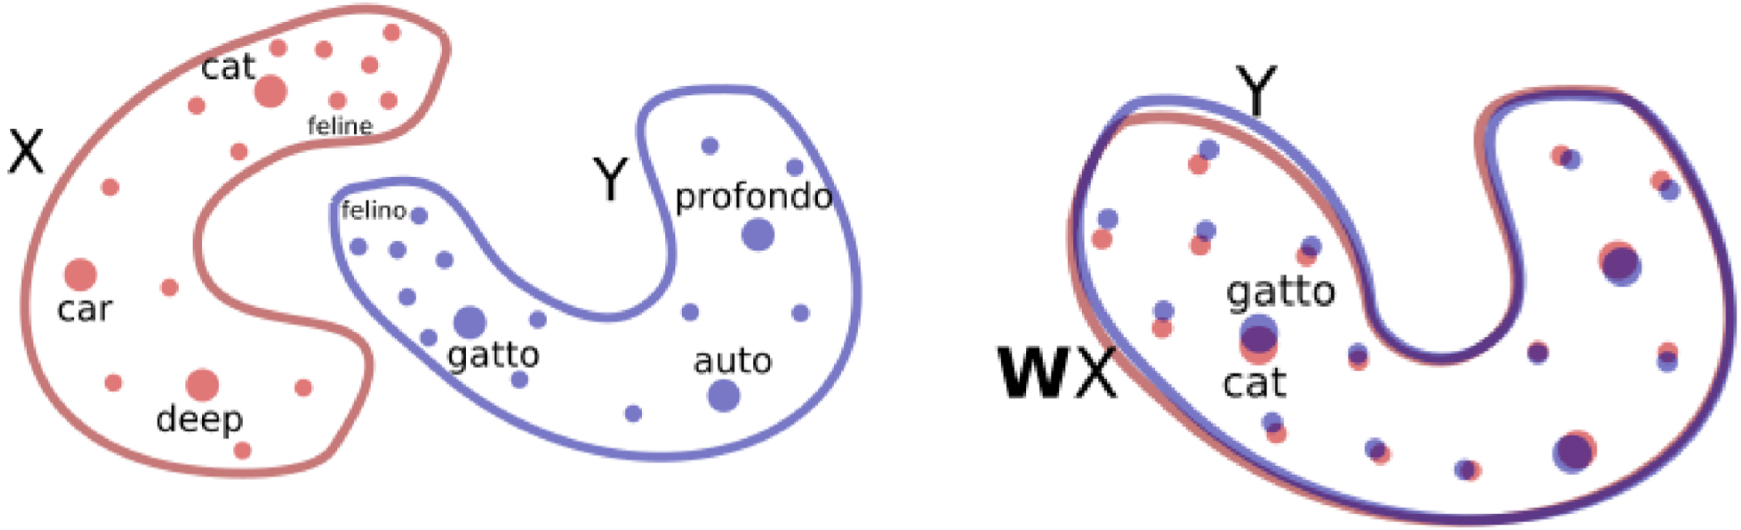
- Word embeddings have a lot of structure

- Assumption: that structure should be similar across languages



Unsupervised Word Translation

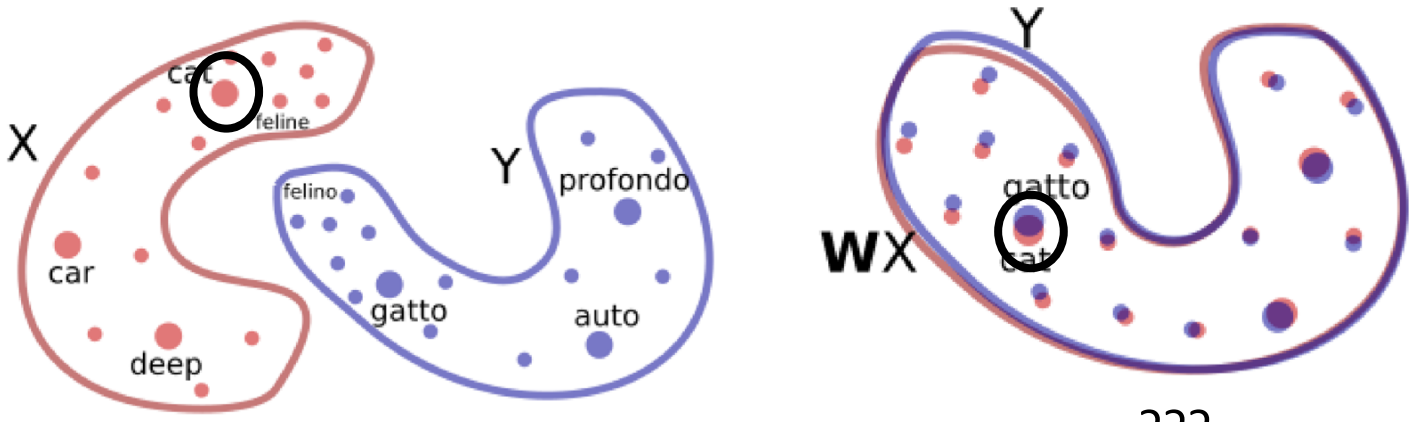
- First run word2vec on monolingual corpora, getting words embeddings *X* and *Y*
- Learn an (orthogonal) matrix *W* such that *WX* ~ *Y*



Unsupervised Word Translation

- Learn *W* with *adversarial training.*
- Discriminator**:** predict if an embedding is from *Y* or it is a transformed embedding *Wx* originally from *X.*
- Train *W* so the Discriminator gets “confused”

Discriminator predicts: is the circled point red or blue?

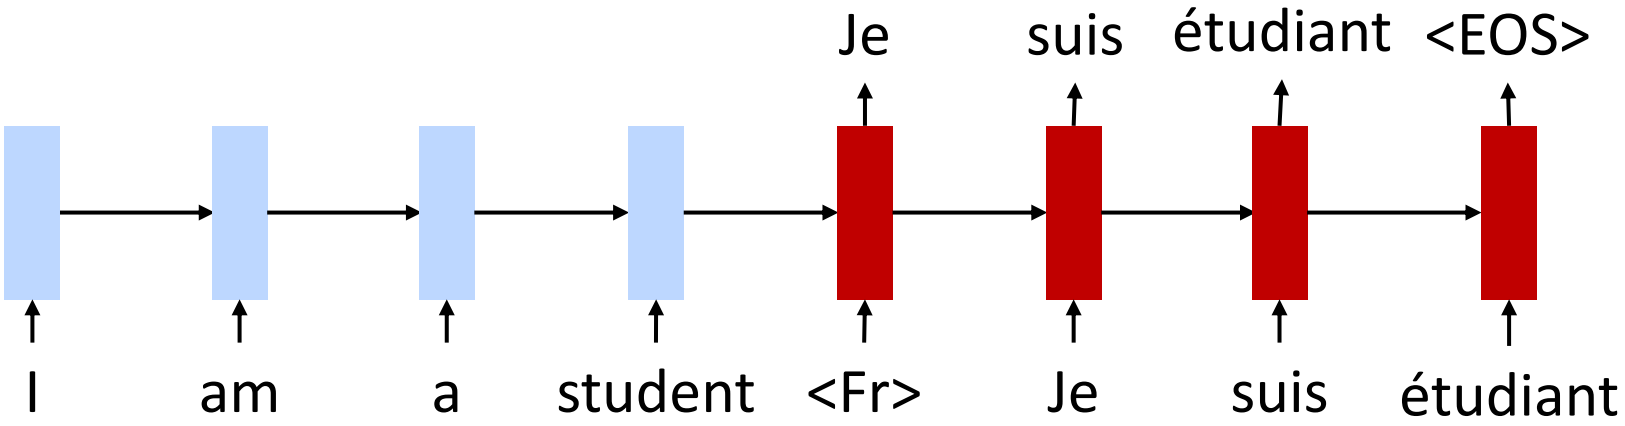


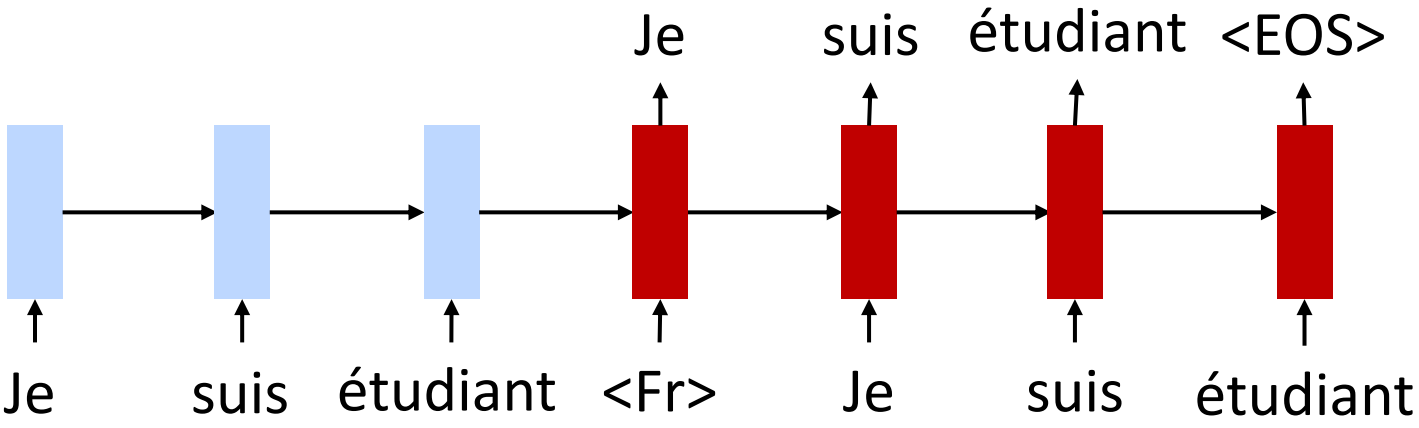
- Other tricks can be used to further improve performance, see [Word Translation without Parallel Data]

Unsupervised Machine Translation

Unsupervised Machine Translation

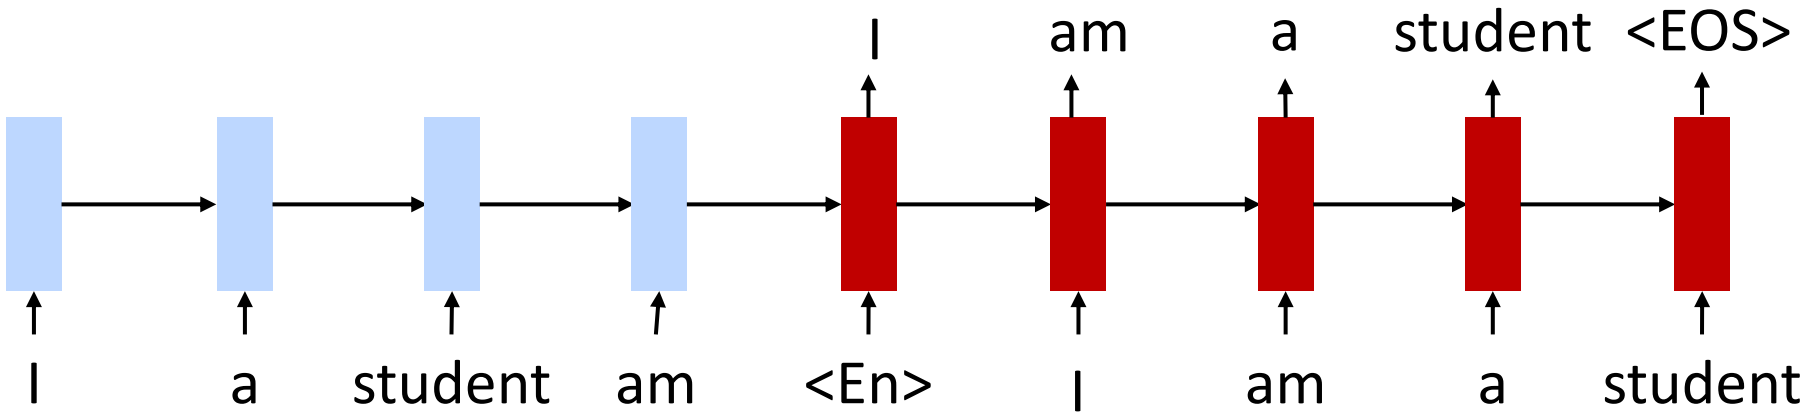
- Model: **same** encoder-decoder used for both languages
  - Initialize with cross-lingual word embeddings





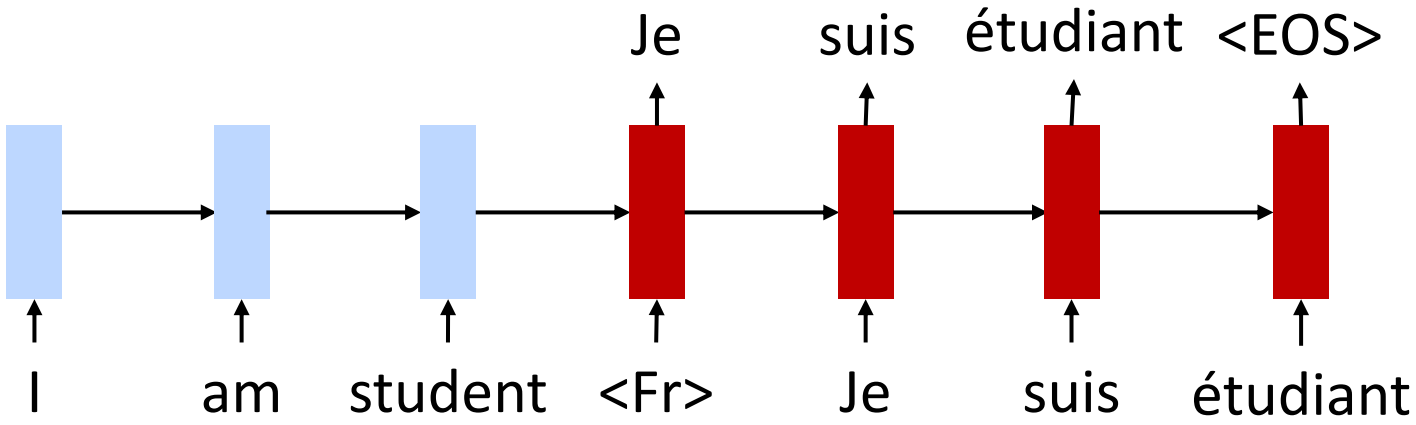
Unsupervised Neural Machine Translation

- Training objective 1: de-noising autoencoder



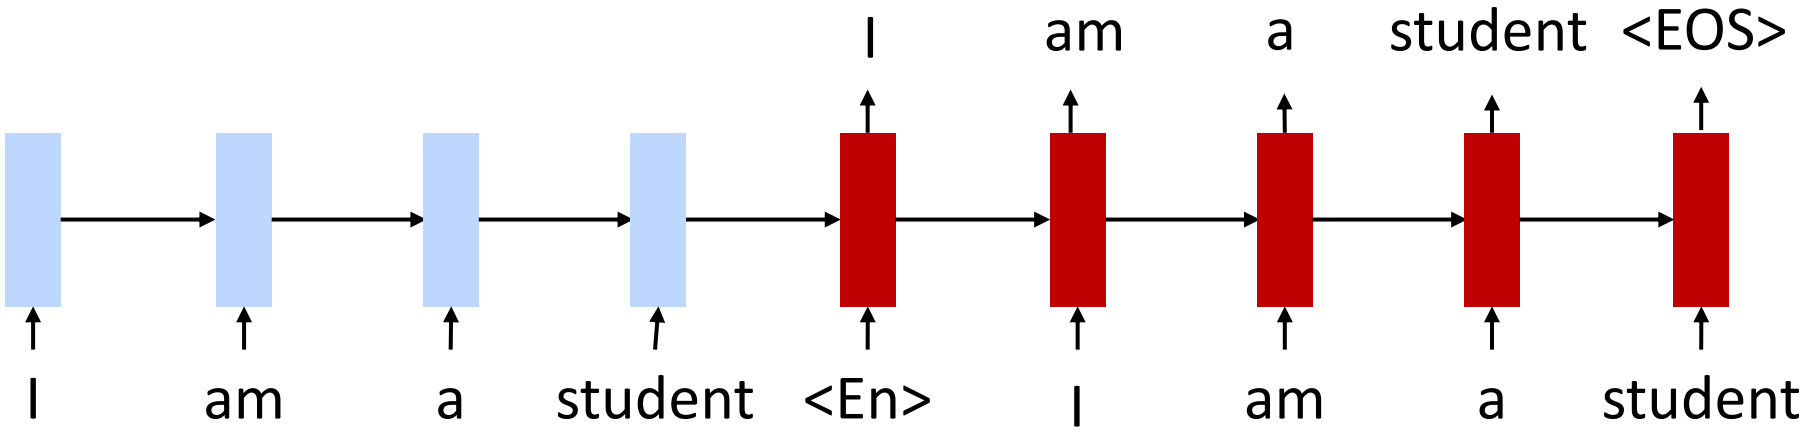
Unsupervised Neural Machine Translation

- Training objective 2: back translation
  - First translate *fr* -> *en*
  - Then use as a “supervised” example to train *en* -> *fr*



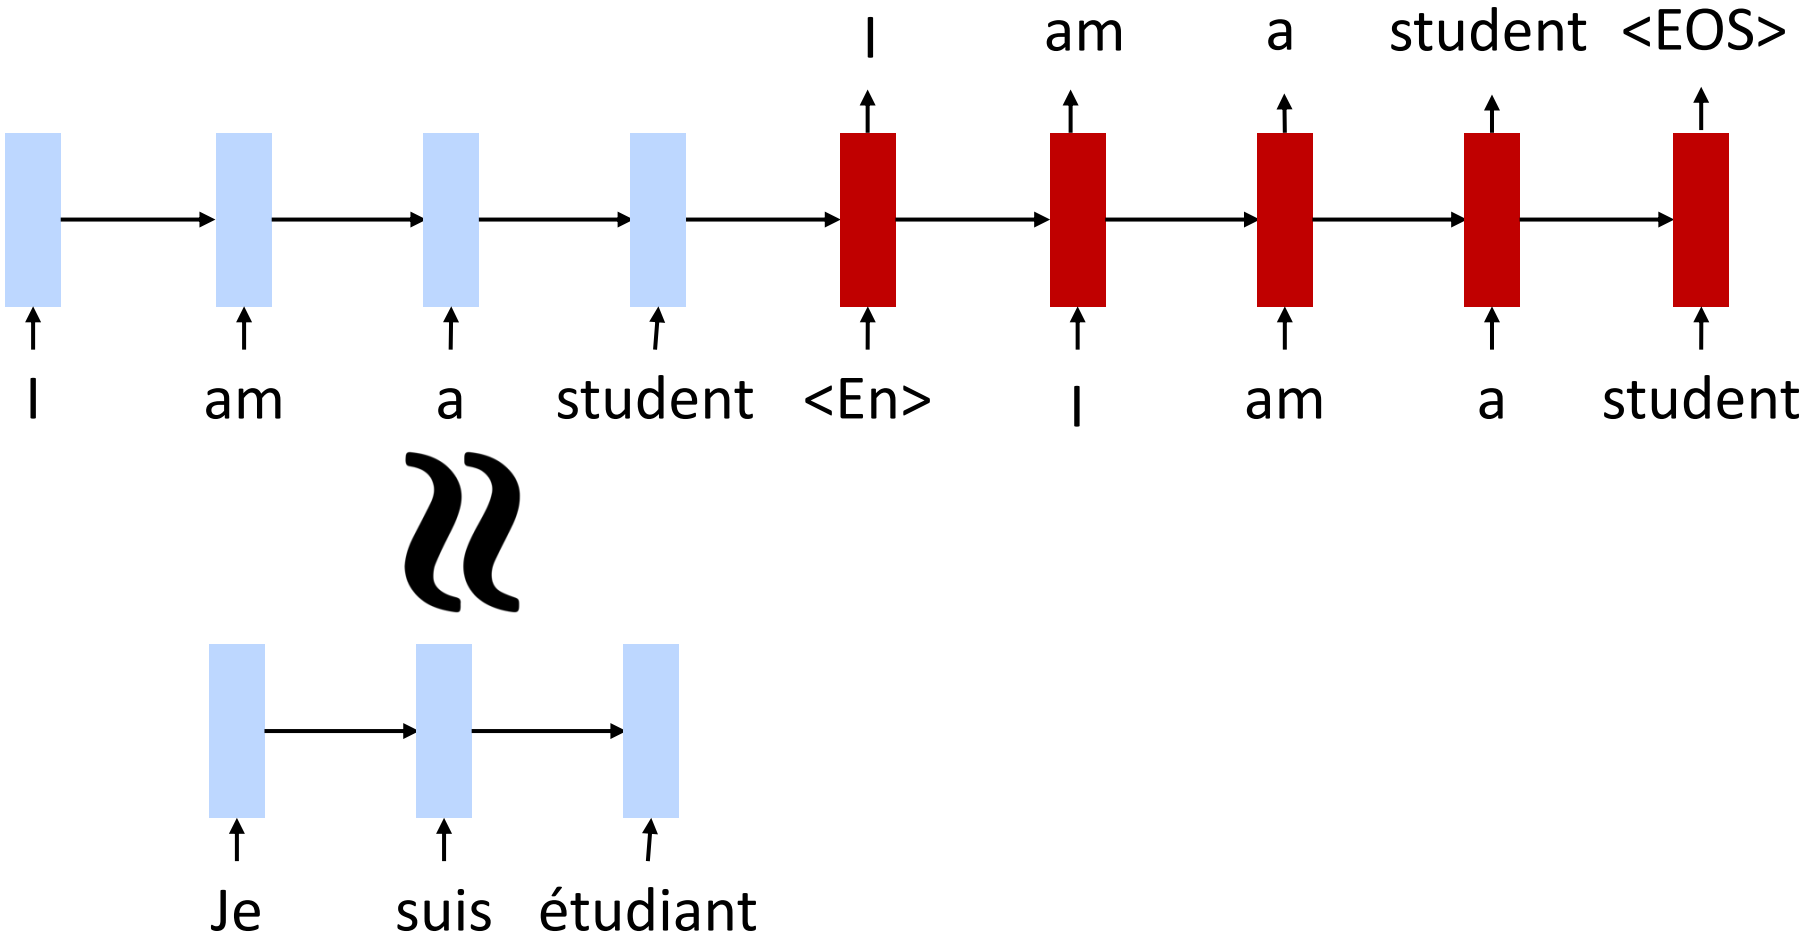
Why Does This Work?

- Cross lingual embeddings and shared encoder gives the model a starting point



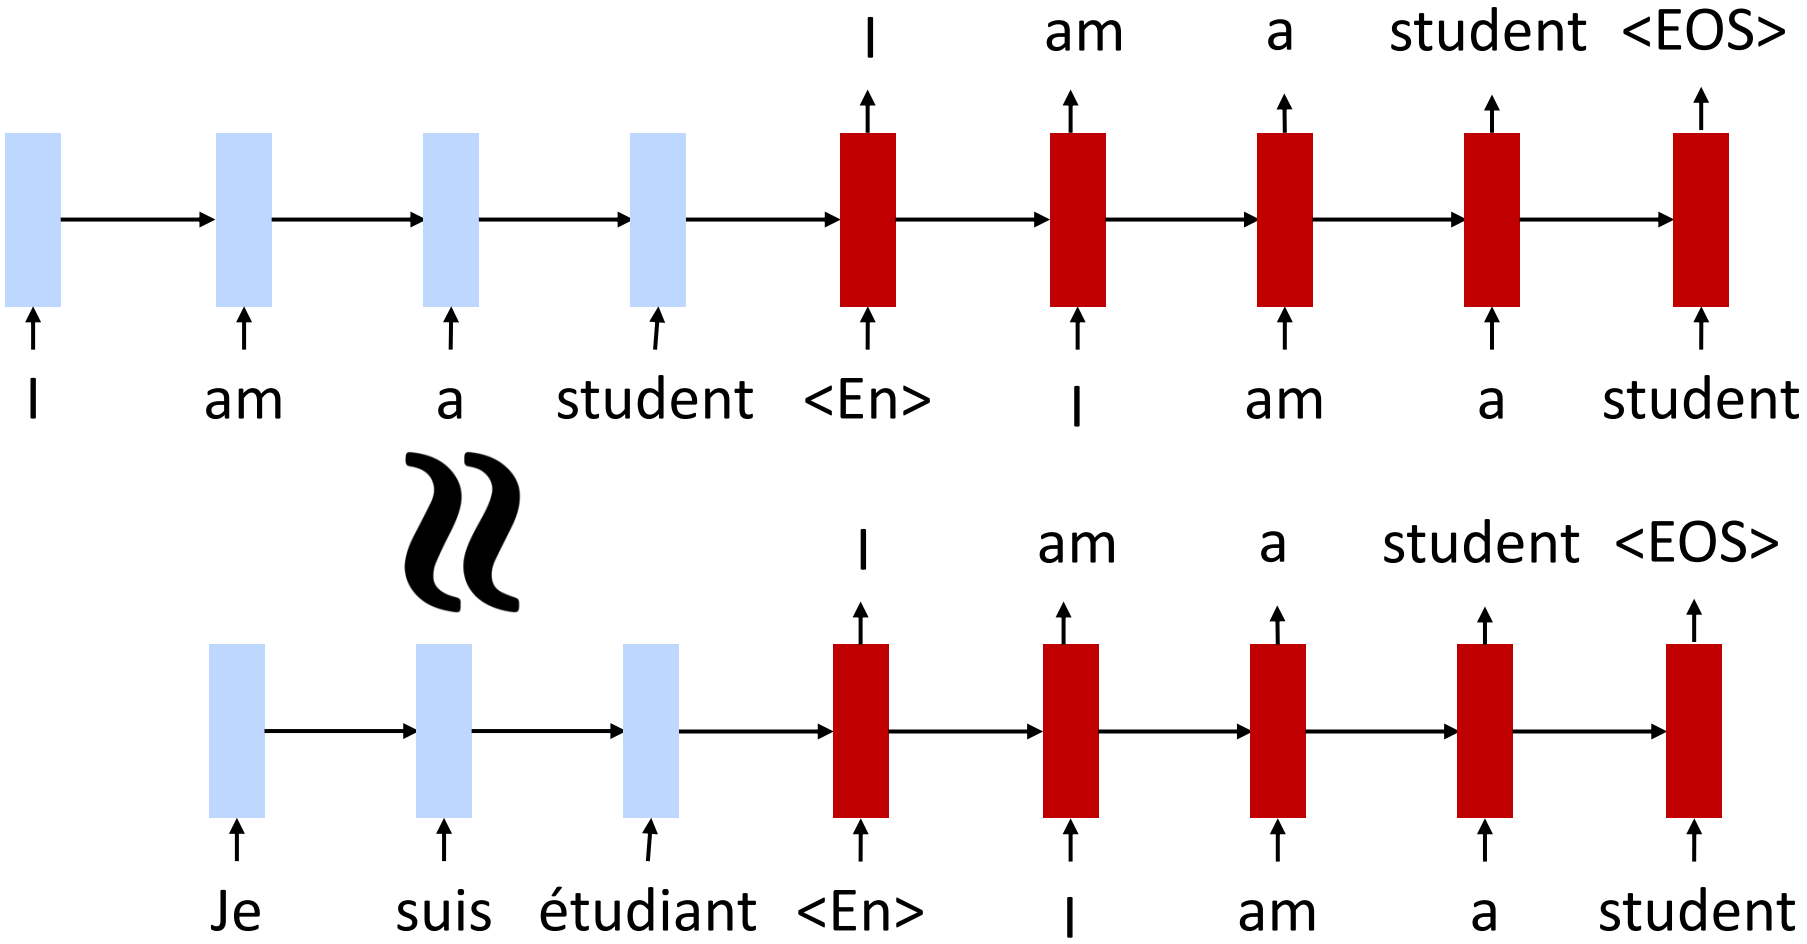
Why Does This Work?

- Cross lingual embeddings and shared encoder gives the model a starting point



Why Does This Work?

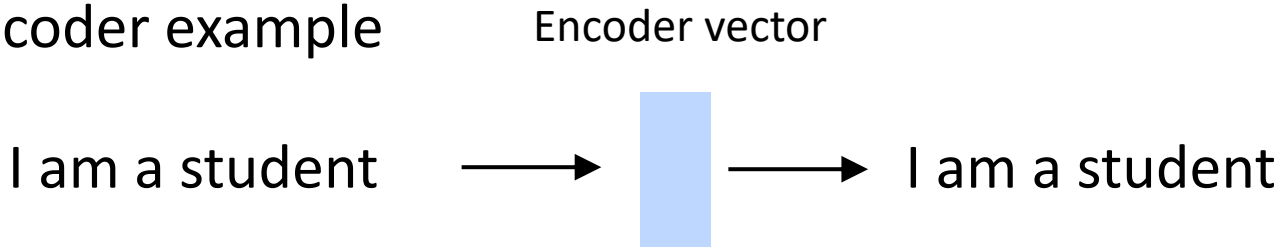
- Cross lingual embeddings and shared encoder gives the model a starting point



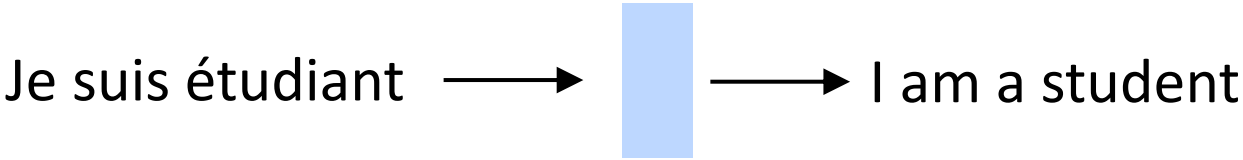
Why Does This Work?

- Objectives encourage language-agnostic representation

Auto-encoder example

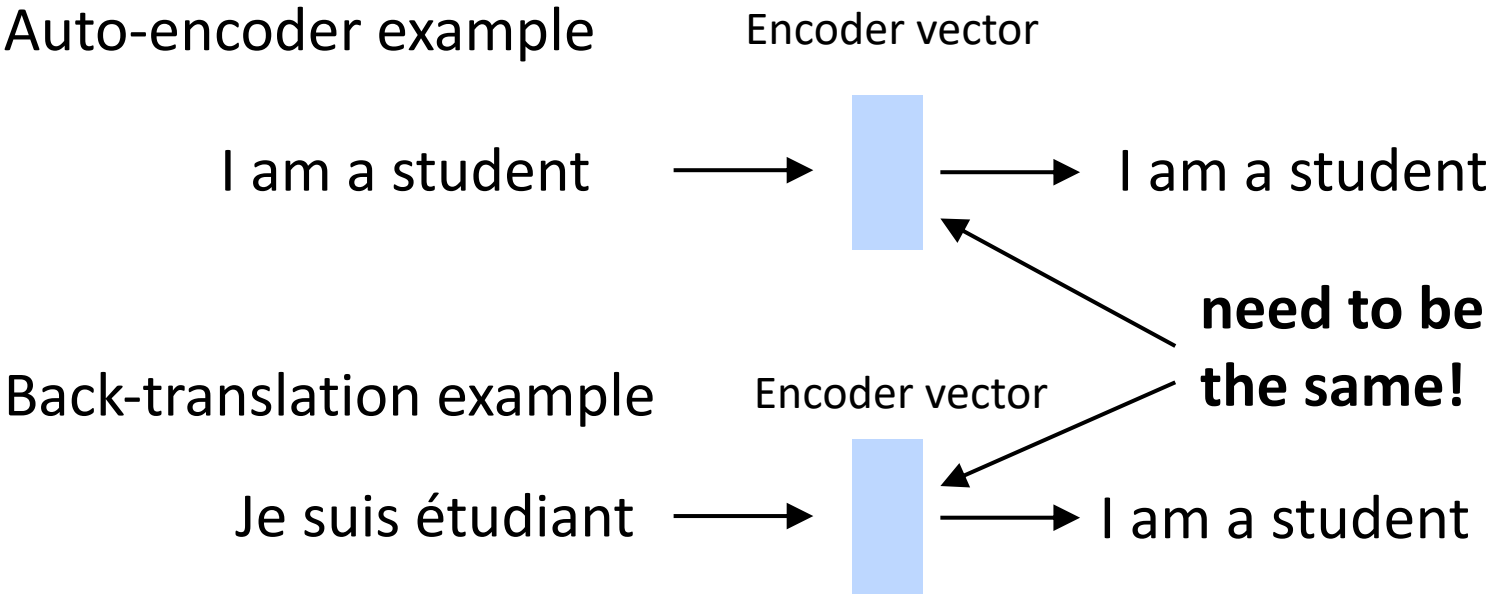


Back-translation example



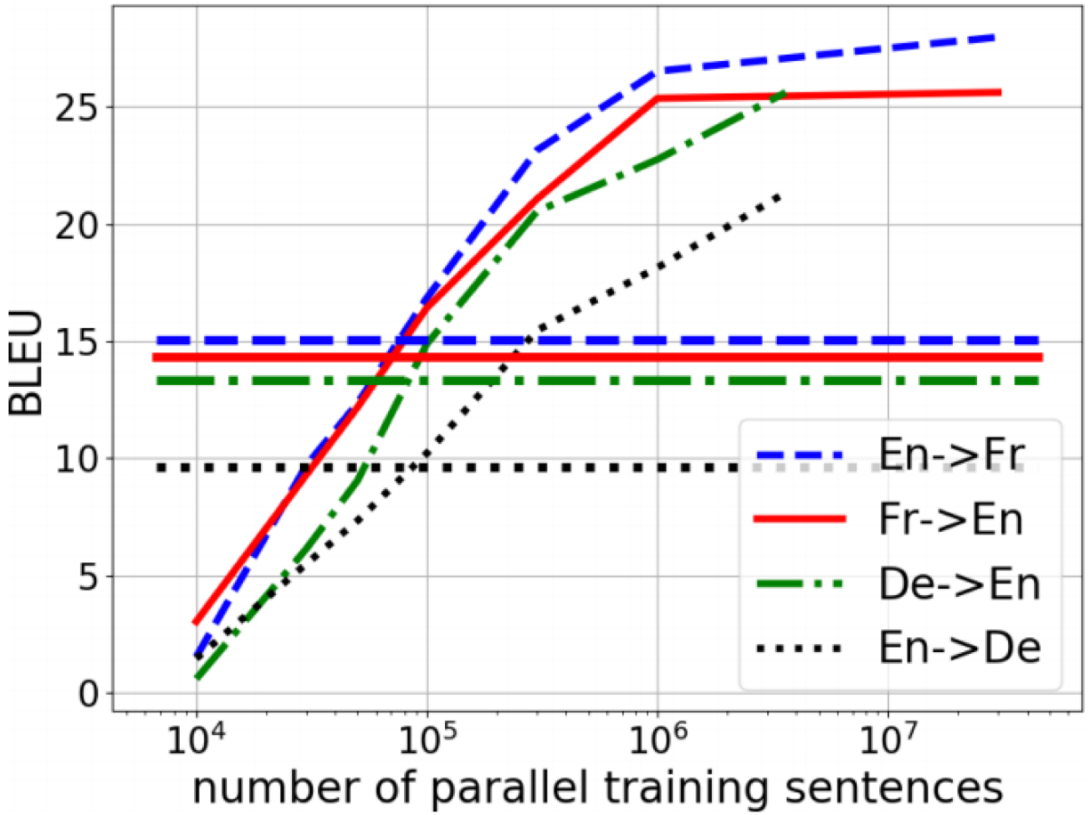
Why Does This Work?

- Objectives encourage language-agnostic representation



Unsupervised Machine Translation

- Horizontal lines are unsupervised models, the rest are supervised



Lample et al., 2018

Attribute Transfer

- Collector corpora of “relaxed” and “annoyed” tweets using hashtags
- Learn un unsupervised MT model

Relaxed ↔ Annoyed	
Relaxed	Sitting by the Christmas tree and watching Star Wars after cooking dinner. What a nice night 💗🎄✨
Annoyed	Sitting by the computer and watching The Voice for the second time tonight. What a horrible way to start the weekend 😡😡😡
Annoyed	Getting a speeding ticket 50 feet in front of work is not how I wanted to start this month 😒
Relaxed	Getting a haircut followed by a cold foot massage in the morning is how I wanted to start this month 😊
Male ↔ Female	
Male	Gotta say that beard makes you look like a Viking...
Female	Gotta say that hair makes you look like a Mermaid...
Female	Awww he’s so gorgeous 😍 can’t wait for a cuddle. Well done 😘 xxx
Male	Bro he’s so f***ing dope can’t wait for a cuddle. Well done bro

Lample et al., 2019

Not so Fast

- English, French, and German are fairly similar

- On very different languages (e.g., English and Turkish)…
  - Purely unsupervised word translation doesn't work very. Need *seed dictionary* of likely translations.
    - Simple trick: use identical strings from both vocabularies

  - UNMT barely works

System	English-Turkish BLEU
Supervised	~20
Word-for-word unsupervised	1.5
UNMT	4.5

Hokamp et al., 2018

Not so Fast

Cross-Lingual BERT

GPT-2

- Just a really big Transformer LM

- Trained on 40GB of text
  - Quite a bit of effort going into making sure the dataset is good quality
  - Take webpages from reddit links with high karma

So What Can GPT-2 Do?

- Obviously, language modeling (but very well)!
- Gets state-of-the-art perplexities on datasets it's not even trained on!

	LAMBADA (PPL)	LAMBADA (ACC)	CBT-CN (ACC)	CBT-NE (ACC)	WikiText2 (PPL)	PTB (PPL)	enwik8 (BPB)	text8 (BPC)	WikiText103 (PPL)	1BW (PPL)

Radford et al., 2019

So What Can GPT-2 Do?

- **Zero-Shot Learning**: no supervised training data!
  - Ask LM to generate from a prompt

- **Reading Comprehension:** <context> <question> A:
- **Summarization:** <article> TL;DR:
- **Translation:**

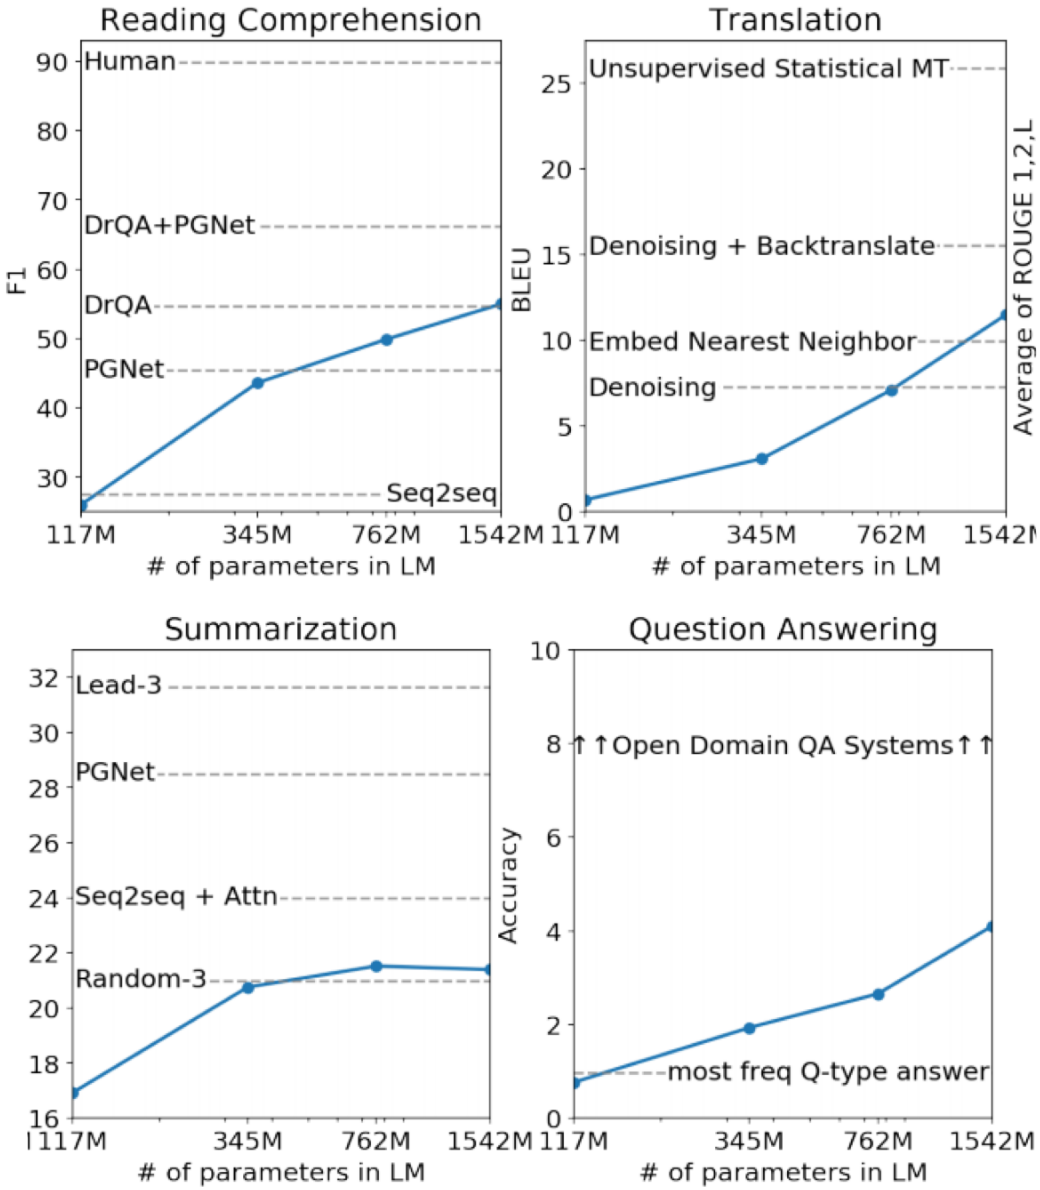
  <English sentence1> = <French sentence1>

  <English sentence 2> = <French sentence 2>

  …..

  <Source sentence> =
- **Question Answering:** <question> A:

GPT-2 Results



How can GPT-2 be doing translation?

- It's just given a big corpus of text that's almost all English

How can GPT-2 be doing translation?

- It's just given a big corpus of text that's almost all English

---

"I'm not the cleverest man in the world, but like they say in French: **Je ne suis pas un imbecile [I'm not a fool].**

In a now-deleted post from Aug. 16, Soheil Eid, Tory candidate in the riding of Joliette, wrote in French: "**Mentez mentez, il en restera toujours quelque chose**," which translates as, "**Lie lie and something will always remain.**"

"I hate the word '**perfume**,"' Burr says. 'It's somewhat better in French: '**parfum.**'

If listened carefully at 29:55, a conversation can be heard between two guys in French: "**-Comment on fait pour aller de l'autre coté? -Quel autre coté?**", which means "**- How do you get to the other side? - What side?**".

If this sounds like a bit of a stretch, consider this question in French: **As-tu aller au cinéma?**, or **Did you go to the movies?**, which literally translates as Have-you to go to movies/theater?

"**Brevet Sans Garantie Du Gouvernement**", translated to English: "**Patented without government warranty**".

GPT-2 Question Answering

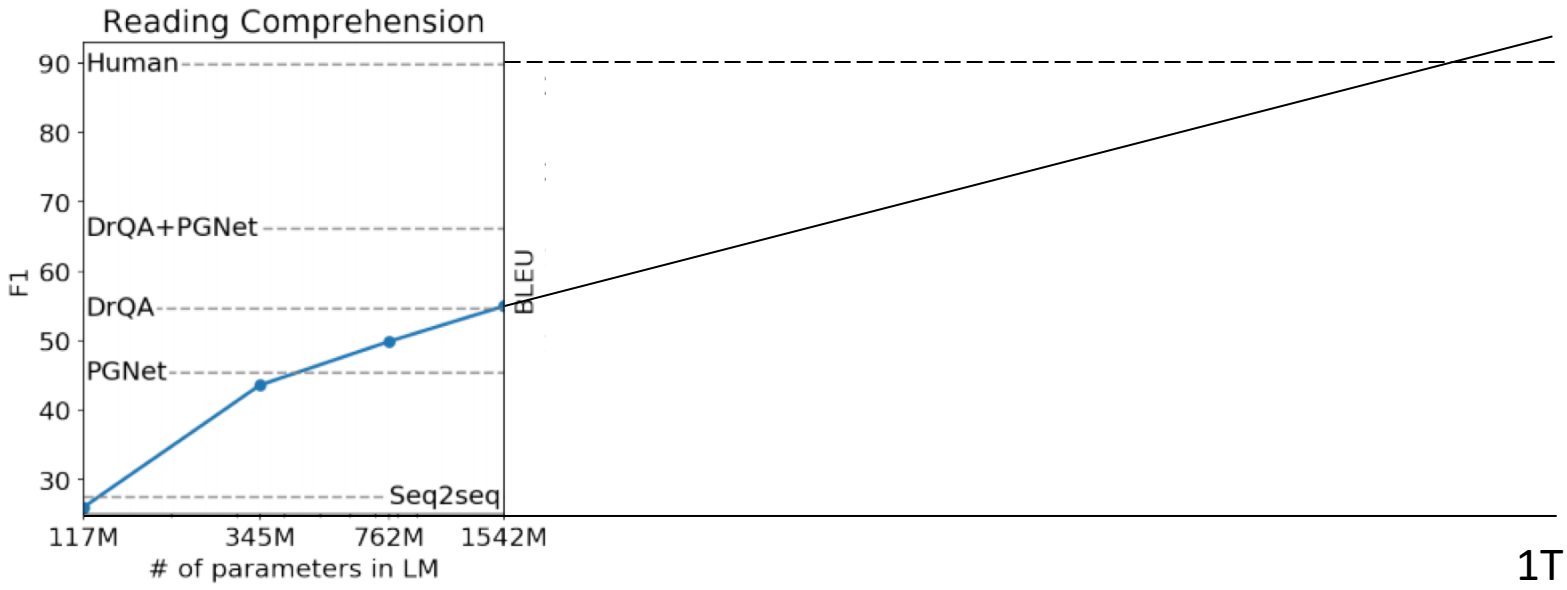
- Simple baseline: 1% accuracy
- GPT-2: ~4% accuracy

- Cherry-picked most confident results

Question	Generated Answer	Correct	Probability
Who wrote the book the origin of species?	Charles Darwin	✓	83.4%
Who is the founder of the ubuntu project?	Mark Shuttleworth	✓	82.0%
Who is the quarterback for the green bay packers?	Aaron Rodgers	✓	81.1%
Panda is a national animal of which country?	China	✓	76.8%
Who came up with the theory of relativity?	Albert Einstein	✓	76.4%
When was the first star wars film released?	1977	✓	71.4%
What is the most common blood type in sweden?	A	✗	70.6%
Who is regarded as the founder of psychoanalysis?	Sigmund Freud	✓	69.3%
Who took the first steps on the moon in 1969?	Neil Armstrong	✓	66.8%
Who is the largest supermarket chain in the uk?	Tesco	✓	65.3%
What is the meaning of shalom in english?	peace	✓	64.0%
Who was the author of the art of war?	Sun Tzu	✓	59.6%
Largest state in the us by land mass?	California	✗	59.2%

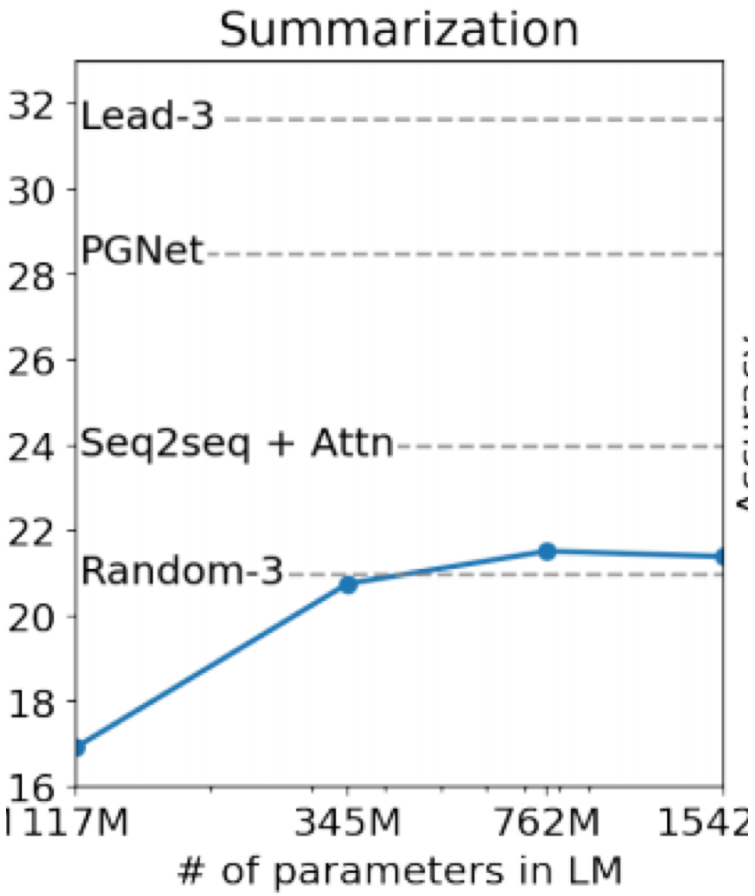
What happens as models get even bigger?

- For several tasks performance seems to increase with log(model size)



What happens as models get even bigger?

- But trend isn't clear



GPT-2 Reaction

GPT-2 Reaction

Due to concerns about large language models being used to generate deceptive, biased, or abusive language at scale, we are only releasing a much smaller version of GPT-2 along with sampling code. We are not releasing the dataset, training code, or GPT-2 model weights. Nearly a year ago we wrote in the OpenAI Charter:

[Discussion] Should I release my MNIST model or keep it closed source fearing malicious use?

Discussion

Today I trained a 23064 layer ResNet and it got 99.6% accuracy on MNIST. I would love to share the model but I fear it being used maliciously. What if it is used to read documents by the Russians? What are your thoughts?

GPT-2 Reaction

Some arguments for release:

Some arguments against:

GPT-2 Reaction

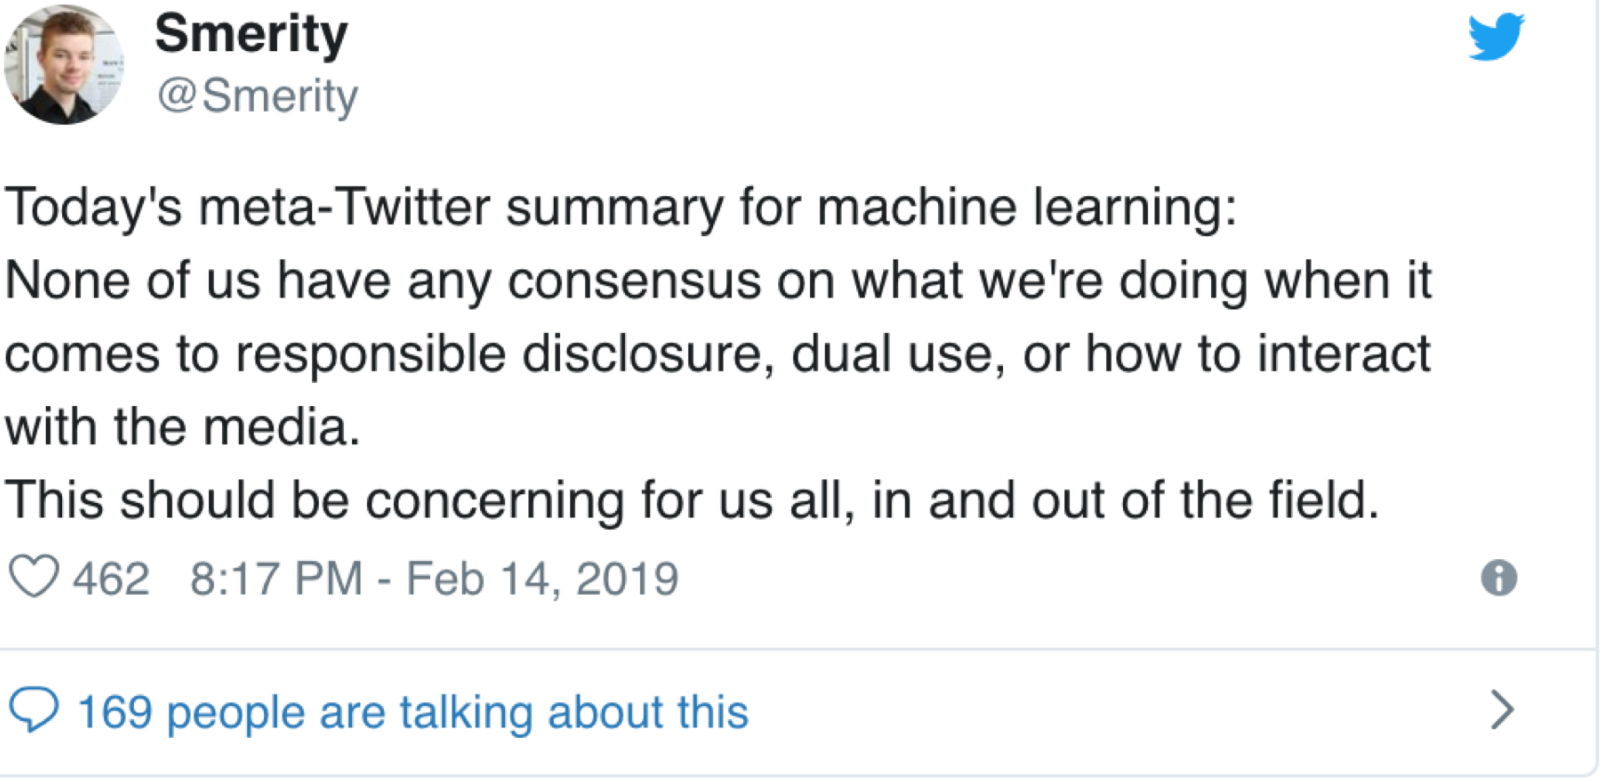
Some arguments for release:

- This model isn't much different from existing work
- Not long until these models are easy to train
  - And we're already at this point for images/speech
- Photoshop
- Researchers should study this model to learn defenses
- Dangerous PR Hype
- Reproducibility is crucial for science
- …

Some arguments against:

- Danger of fake reviews, news comments, etc.
  - Already done by companies and governments
- Precedent
  - Event if this model isn't dangerous, later ones will be even better
- Smaller model is being released
- ….

GPT-2 Reaction



GPT-2 Reaction

- Should NLP experts be the ones making these decisions?
  - Experts on computer security?
  - Experts on technology and society?
  - Experts on ethics?

- Need for more interdisciplinary science

- Many other examples of NLP with big social ramifications, especially with regards to bias/fairness

High-Impact Decisions

- Growing interest in using NLP to help with high-impact decision making
  - Judicial decisions
  - Hiring
  - Grading tests

- Plus side: can quickly evaluate a machine learning system for some kinds of bias

- However, machine learning reflects or even amplifies bias in training data
  - …which could lead to the creation of even more biased data

Harder Natural Language Understanding

- Reading comprehension…
  - On longer documents or multiple documents
  - That requires multi-hop reasoning
  - Situated in a dialogue

- Key problem with many existing reading comprehension datasets: *People writing the questions see the context*
  - Not realistic
  - Encourages easy questions

QuAC: Question Answering in Context

- Dialogue between a student who asks questions and a teacher who answers
  - Teacher sees Wikipedia article on the subject, student doesn't

Section: Daffy Duck, Origin & History

STUDENT: **What is the origin of Daffy Duck?**
TEACHER: ↪ first appeared in Porky's Duck Hunt
STUDENT: **What was he like in that episode?**
TEACHER: ↪ assertive, unrestrained, combative
STUDENT: **Was he the star?**
TEACHER: ↪ No, barely more than an unnamed bit player in this short
STUDENT: **Who was the star?**
TEACHER: ↛ No answer
STUDENT: **Did he change a lot from that first episode in future episodes?**
TEACHER: ↪ Yes, the only aspects of the character that have remained consistent (...) are his voice characterization by Mel Blanc
STUDENT: **How has he changed?**
TEACHER: ↪ Daffy was less anthropomorphic
STUDENT: **In what other ways did he change?**
TEACHER: ↪ Daffy's slobbery, exaggerated lisp (...) is barely noticeable in the early cartoons.
STUDENT: **Why did they add the lisp?**
TEACHER: ↪ One often-repeated "official" story is that it was modeled after producer Leon Schlesinger's tendency to lisp.
STUDENT: **Is there an "unofficial" story?**
TEACHER: ↪ Yes, Mel Blanc (...) contradicts that conventional belief
. . .

HotPotQA

- Designed to require *multi-hop reasoning*
- Questions are over *multiple documents*

Paragraph A, Return to Olympus:
[1] *Return to Olympus is the only album by the alternative rock band Malfunkshun.* [2] *It was released after the band had broken up and after lead singer Andrew Wood (later of Mother Love Bone) had died of a drug overdose in 1990.* [3] Stone Gossard, of Pearl Jam, had compiled the songs and released the album on his label, Loosegroove Records.

Paragraph B, Mother Love Bone:
[4] *Mother Love Bone was an American rock band that formed in Seattle, Washington in 1987.* [5] The band was active from 1987 to 1990. [6] *Frontman Andrew Wood's personality and compositions helped to catapult the group to the top of the burgeoning late 1980s/early 1990s Seattle music scene.* [7] *Wood died only days before the scheduled release of the band's debut album, "Apple", thus ending the group's hopes of success.* [8] The album was finally released a few months later.

Q: What was the former band of the member of Mother Love Bone who died just before the release of "Apple"?
A: Malfunkshun
Supporting facts: 1, 2, 4, 6, 7

Figure 1: An example of the multi-hop questions in HotpotQA. We also highlight the supporting facts in *blue italics*, which are also part of the dataset.

Zang et al., 2018

Multi-Task Learning

- Another frontier of NLP is getting one model to perform many tasks. GLUE and DecaNLP are recent examples.

- Multi-task learning yields improvements on top of BERT

BERT + Multi-task

Rank	Name	Model	URL	Score
1	GLUE Human Baselines	GLUE Human Baselines		87.1
2	王玮	ALICE large (Alibaba DAMO NLP)		83.0
3	Microsoft D365 AI & MSR AI	MT-DNNv2 (BigBird)		83.0
4	Jason Phang	BERT on STILTs		82.0
5	Jacob Devlin	BERT: 24-layers, 16-heads, 1024-hid		80.5

Low-Resource Settings

- Models that don't require lots of compute power (can't use BERT)!
  - Especially important for mobile devices
- Low-resource languages
- Low-data settings (few shot learning)
  - Meta-learning is becoming popular in ML.

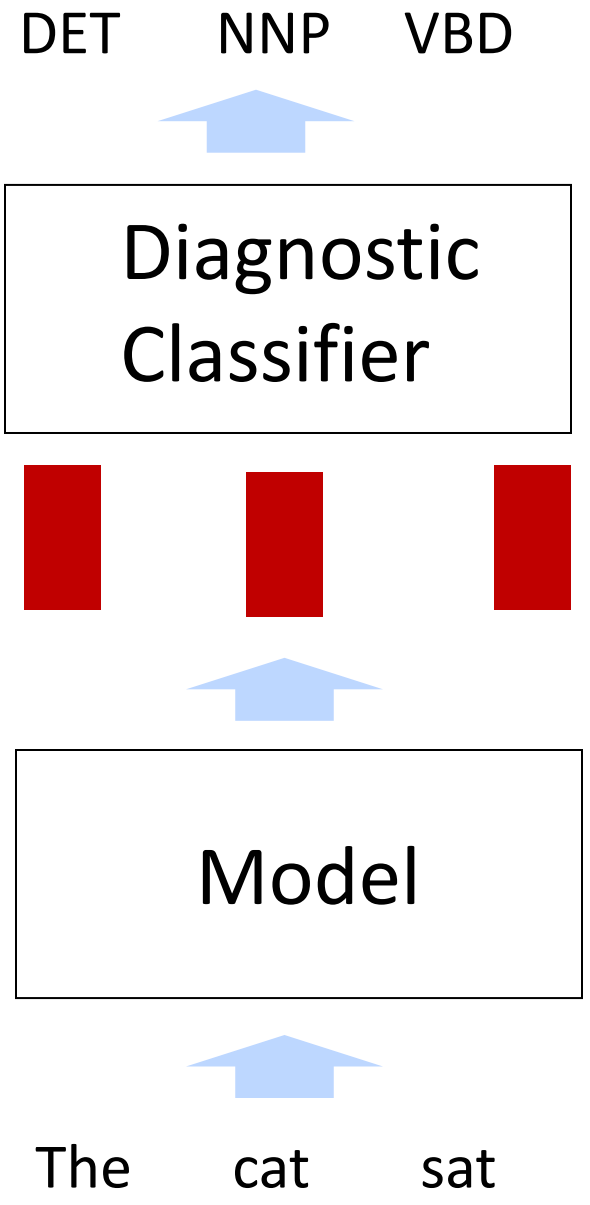
Interpreting/Understanding Models

- Can we get explanations for model predictions?
- Can we understand what models like BERT know and why they work so well?

- Rapidly growing area in NLP
- Very important for some applications (e.g., healthcare)

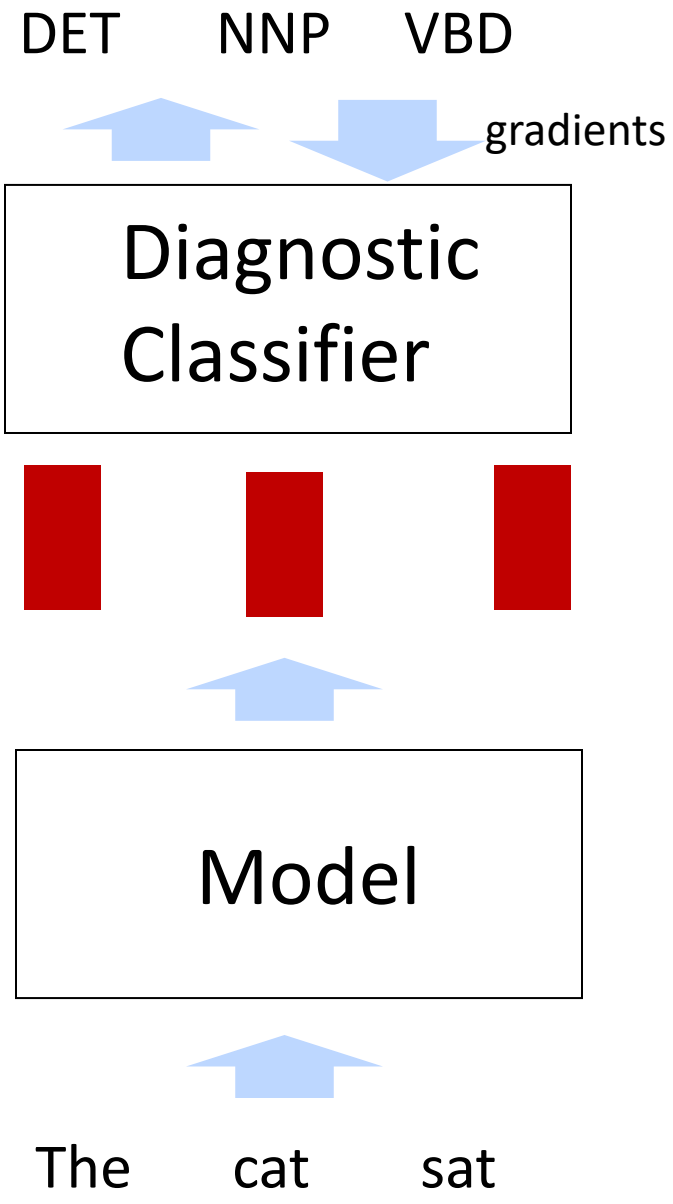
Diagnostic/Probing Classifiers

- Popular technique to see what linguistic information models "know"
- Diagnostic classifier takes representations produced by a model (e.g., BERT) as input and do some task



Diagnostic/Probing Classifiers

- Popular technique to see what linguistic information models "know"
- Diagnostic classifier takes representations produced by a model (e.g., BERT) as input and do some task
- Only the diagnositic classifier is trained



Diagnostic/Probing Classifiers

- Diagnostic classifiers are usually very simple (e.g., a single softmax). Otherwise they could learn to do the tasks without looking at the model representations

- Some diagnostic tasks

POS	The important thing about Disney is that it is a global $[\text{brand}]_1$. $\rightarrow$ NN (Noun)
Constit.	The important thing about Disney is that it $[\text{is a global brand}]_1$. $\rightarrow$ VP (Verb Phrase)
Depend.	$[\text{Atmosphere}]_1$ is always $[\text{fun}]_2$ $\rightarrow$ nsubj (nominal subject)
Entities	The important thing about $[\text{Disney}]_1$ is that it is a global brand. $\rightarrow$ Organization
SRL	$[\text{The important thing about Disney}]_2$ $[\text{is}]_1$ that it is a global brand. $\rightarrow$ Arg1 (Agent)

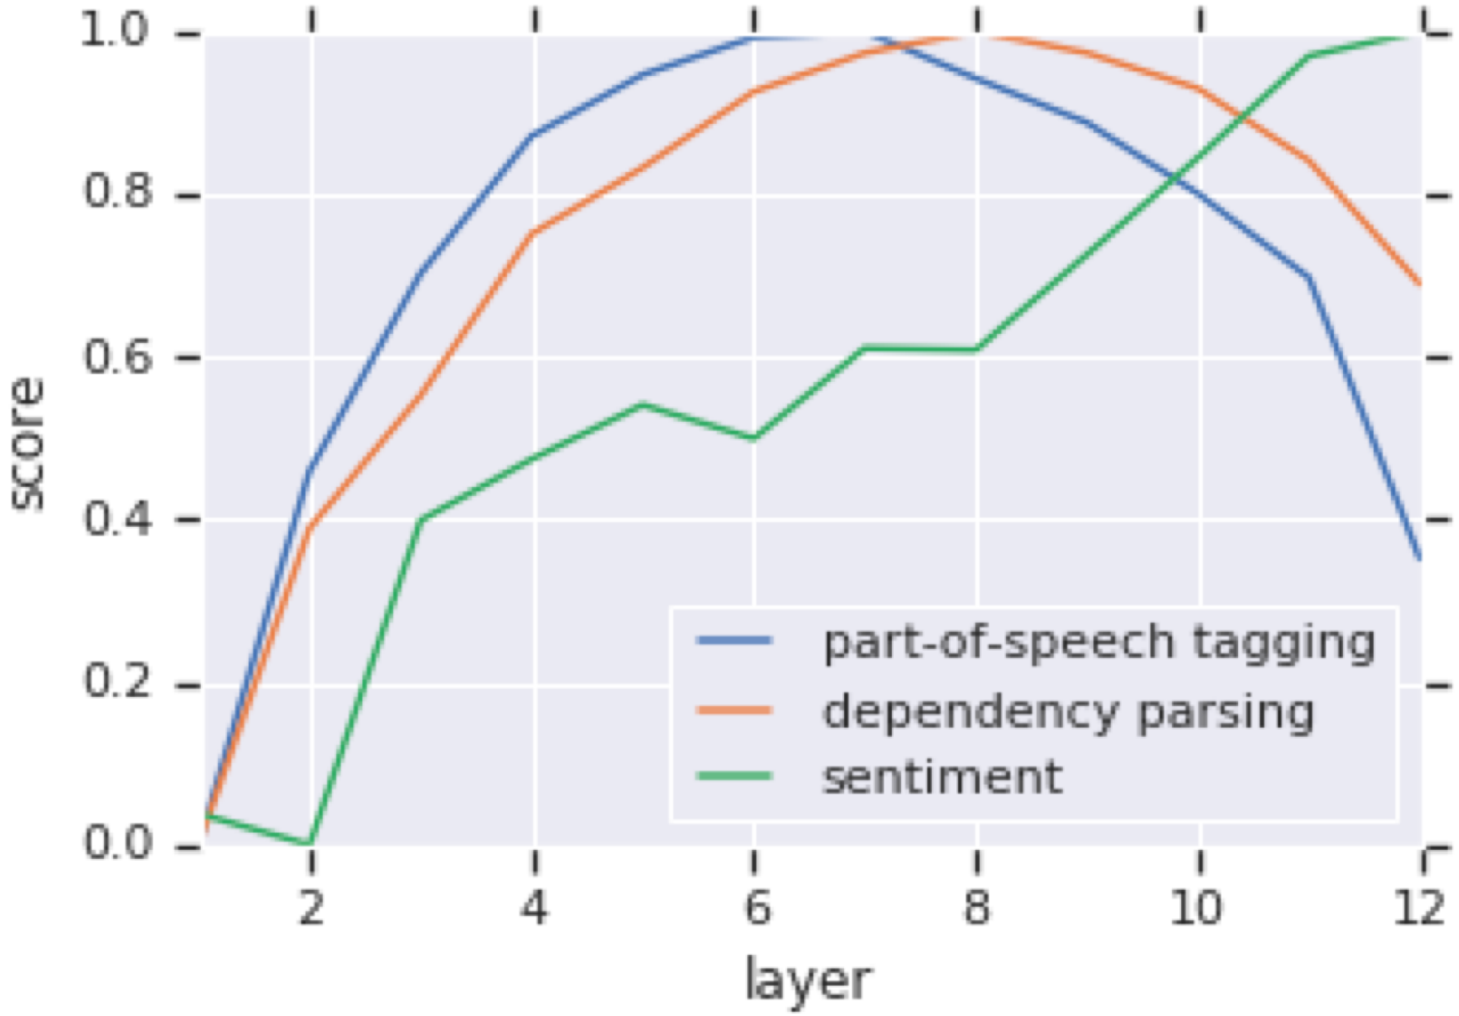
Coref.$^{\text{O}}$	The important thing about $[\text{Disney}]_1$ is that $[\text{it}]_2$ is a global brand. $\rightarrow$ True
Coref.$^{\text{W}}$	$[\text{Characters}]_2$ entertain audiences because $[\text{they}]_1$ want people to be happy. $\rightarrow$ True Characters entertain $[\text{audiences}]_2$ because $[\text{they}]_1$ want people to be happy. $\rightarrow$ False
Rel.	The $[\text{burst}]_1$ has been caused by water hammer $[\text{pressure}]_2$. $\rightarrow$ Cause-Effect(e_2, e_1)

Diagnostic/ Probing Classifiers: Results

- Lower layers of BERT are better at lower-level tasks



NLP in Industry

- NLP is rapidly growing in industry as well. Two particularly big areas:

- Dialogue
  - Chatbots
  - Customer service

- Healthcare
  - Understanding health records
  - Understanding biomedical literature

Conclusion

- Rapid progress in the last 5 years due to deep learning.
- Even more rapid progress in the last year due to larger models, better usage of unlabeled data
  - Exciting time to be working on NLP!
- NLP is reaching the point of having big social impact, making issues like bias and security increasingly important.

Good luck with your projects!
